PREFACE

This edition of *WMEAT* (pronounced "we-meet"), the twenty-fourth in the series issued by the Arms Control and Disarmament Agency, is intended to serve as a convenient reference on military expenditures, arms transfers, armed forces, and related economic data for 172 countries over the 1984-1994 decade. We have continued our efforts to provide comprehensive, up-to-date, and accurate data, accompanied by pertinent analyses and highlights.

Features in this edition include a set of tables ranking the countries of the world by each variable in 1994 and an essay on recent developments in U.S. arms export control policy.

Future editions are now available through the Standing Order Service of the Superintendent of Documents. Copies of this report may be obtained by placing an order with the Superintendent of Documents (telephone no. 202 512-1800).

Comments and questions regarding this publication are welcome. They may be directed to:

FOREWORD

This, the 24th edition of *World Military Expenditures and Arms Transfers (WMEAT)*, presents a mixed statistical picture of global military effort through 1994. There have been gratifying declines in militarization in many areas of the world. In some of these areas, however, the reductions have been caused by serious economic difficulties and may not be durable. In other areas there are signs of new buildups of forces. Military spending and conventional arms imports in the developing world as a whole have declined from their Cold War highs of the 1980's, but have not yet fallen below levels of the mid-1970's.

Arms controllers naturally and properly tend to focus mainly on the forces and weapons that are the most devastating, that threaten destruction on a mass scale. At the same time, we would do well to remember that the same motives impelling countries to build up their conventional forces also inspire the proliferation of mass-destruction weapons. If we can successfully address the former, we may do a great deal to lessen the latter as well.

ACDA is strengthening its focus on regional and local arms issues and the arms control means to address them. These include ways to encourage military transparency, as exemplified by the present report. Now more than ever, we need strong efforts against proliferation and for arms control and other non-military means of enhancing security.

Highlights

Military Expenditures

Figure 1. World Military Expenditures, 1961-1994

* The logarithmic or ratio scale used in this and other figures is designed to facilitate comparisons of rates of change. A ratio scale is compressed as values increase so that, anywhere on the chart, equal vertical distances represent equal ratios of value and equal slopes represent equal rates of change.

The downward trend in world military spending continued in 1994 with a 5% drop to \$840 billion, the lowest level since 1966 and 35% below the all-time peak of \$1.3 trillion in 1987 (1994 dollars--Figure 1 and Main Table I).

The cumulative world reductions from 1987 to 1994 amounted to over \$1.5 trillion dollars (comparing the peak year to each subsequent year). However, since the reduction in military spending occurred mainly in Eastern Europe (\$1.25 trillion), where it was accompanied by a cumulative decline of \$9.4 trillion in aggregate GNP, most of it cannot be considered "savings". The rest of the world excluding Eastern Europe amassed reductions of only \$123 billion between the peak in 1986 and 1994.

Note: The "Developed" and "Developing" groups of countries have been modified by moving eight countries from the latter to the former and one country, the reverse. (See [Statistical Notes, Coverage...](#))

Most of the cumulative reduction in military spending occurred in the developed group of countries, again primarily due to the sharp Soviet/Russian downturn as well as the less rapid but still large US decline.

Military spending in the developing countries as a group began to decline earlier, in 1983, a trend that has continued at a moderate rate since then with the exception of a "bulge" in 1990-1992 due to the Persian Gulf War (Figure 2). The group has spent about \$300 billion less, cumulated over years since the 1983 peak, although the annual rate of decline has been 2.7% over the 1984-1994 period.

Regional Developments

The shares of world spending by region over the decade show a substantial rise for North America (from 27 to 36%), Western Europe (from 16 to 22%), and East Asia (from 10 to 17%), with a concomitant reduction mainly for Eastern Europe (from 35 to 14%) and the Middle East (from 8 to 5%) (Table 1).

Figure 2. World Military Expenditures, 1984-1994

Eastern Europe averaged a steep 27% annual decline in the 1990-1994 period, as did the former Warsaw Pact countries, whose peak 1988 spending of over \$450 billion dropped to (a roughly estimated) \$112 billion in 1994, a 75% reduction.

Eastern Europe's decline was of course mainly in the Soviet Union and its successor states, which together in the 1990-1994 period fell nearly 70% overall and 28% per year.

Military spending in other regions moved in various directions in the 1990-1994 period (see Table 1, Figure 3, and the box on the following page).

Table 1
Military Expenditures: Shares and Growth
(In percent)

	World Share		Real Growth Rate*	
	1984	1994	Decade 84- 94	2nd Half 90-94
World	100.0	100.0	-4.2	-8.9
Developed	81.4	80.5	-4.5	-9.3
Developing	18.6	19.5	-2.7	-7.2
Region				
North America	27.1	35.7	-1.7	-3.1
Western Europe	16.0	22.2	-.6	-2.6
East Asia	9.7	17.2	1.7	2.1
Eastern Europe	34.9	13.6	-13.2	-27.2
Middle East	8.0	5.4	-4.9	-18.0
South America	1.6	1.9	-1.9	-2.4
South Asia	.7	1.6	2.3	2.6
Oceania	.6	1.2	2.0	4.9
North Africa	.8	.5	-7.3	-5.6
Subsaharan Africa	.3	.4	.8	-6.3
Central Asia & Cauc.	---	.2	---	---
Central America & Car.	.3	.1	-11.7	-21.8
Europe, all	50.1	35.7	-7.8	-16.0
Africa, all	1.5	1.3	-3.8	-7.6
Organization / Reference Group				
OECD	46.2	64.4	-.9	-2.4
OPEC	6.3	4.1	-4.9	-20.6
NATO, all	41.7	55.9	-1.3	-3.0
Warsaw Pact (fmr)	34.4	13.3	-13.2	-27.3
NATO Europe	14.8	20.4	-.6	-2.7
Latin America	2.0	2.3	-2.8	-3.2
CIS	---	11.8	---	---

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

Regions ranked by average annual rates of change in military spending, 1990-1994:

Eastern Europe	-27.2%
Central America & Caribbean	-21.8
Middle East	-18.0
Subsaharan Africa	-6.3
North Africa	-5.6
North America	-3.1
Western Europe	-2.6

South America	-2.4
East Asia	+2.1
South Asia	+2.6
Oceania	+4.9

The US reduced its spending by 3.2% annually since 1990, although it still accounted for 36% of the world total in 1994.

Western Europe as a whole declined a little over 2.5% annually since 1990, as did NATO Europe. **All NATO now accounts for 56% of world military spending.**

East Asia, now the third largest spending region, showed a 2.5% growth rate in 1990-1994. Very rough estimates of military spending in China (Mainland) make it the third largest spender in the world (following the United States and Russia), and Japan is fourth. Of the 11 East Asian countries whose 1994 military spending exceeded \$1 billion, 10 had positive annual growth rates in the 1990-1994 period (North Korea being the only one in decline), of which three had rates over 10% (Thailand, Burma, and Malaysia) and three had rates of 5 to 10% (Singapore, Indonesia, and China-Taiwan). The lower growth rates of Mainland China (.7%) and Japan (1.8%) restrain the regional average, in view of their large size.

The decline in the Middle East reflects the passing of the Gulf War bulge. Notable annual rates of decline were posted in 1990-1994 by most of the largest spenders: Saudi Arabia (largest--13%), Syria (20%), Kuwait (37%), Iran (18%) and Iraq (38%--both very roughly estimated), and the United Arab Emirates (16%). Israel (2nd largest) declined slightly, while positive growth rates were shown by Yemen (6%) and Egypt (3%).

The 5% growth rate experienced by Oceania in the period was attributable to Australia's 6% rate, as all others in the region declined.

A ranking of the top twenty military spenders in 1994 (Figure 4, following page), in comparison with a similar ranking for 1993 in the previous edition of this report, shows that Japan has risen to fourth place (after the US, Russia, and China) and Australia has replaced India in 13th place.

Armed Forces

World armed forces fell from 24.6 million members in 1993 to 23.5 million in 1994, a drop of slightly over 4% (Main Table I). This continues a downward trend following the decade high of 28.7 million set in 1988. The worldwide trend over the decade was relatively flat with only a 2% annual decline, which almost doubled in the latter half of the decade, to 3.7% (Figure 5 and Table 2).

Figure 5. World and Regional Armed Forces, 1984-1994

Developed and Developing Trends

Developed country armed forces fell much faster than the developing group, with annual declines of roughly 8% between 1990-1994 and 4% over the decade. Developing countries fell 1.3% and .4% annually during the same periods, respectively. The 7.9 million soldiers of developed countries account for 34% of the total in 1994, nine percentage points less than in 1984.

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

Developing countries' forces, which peaked at 17 million in 1989, totaled 15.6 million in 1994, slightly less than double the developed countries' forces. **Developing countries accounted for roughly 57-60% of total armed forces between 1984-1991 and rose to 64% in 1992-1993 and to 66% in 1994.**

Thirteen of the world's twenty largest forces in 1994 belonged to developing countries (Figure 4). China, India and North Korea all had forces of over 1 million soldiers in 1994 and ranked first, fourth, and fifth in the world, respectively. The next five largest armies of developing countries--Vietnam, Turkey, Pakistan, Iran, and the Ukraine--all had armed forces totaling between a half million and 1 million soldiers. Two former developing countries--South Korea (with 750,000 soldiers in 1994) and Taiwan (with 435,000)--with historically large forces were redefined in this edition as developed.

Along with the top three developing countries, there were two developed country armies of more than 1 million soldiers in 1994--the United States, ranked second in the world, and Russia, ranked third. Together, the five largest armies accounted for 37% of the world's total military strength.

All regions of the world showed declines in total armed forces in both the 10-year and 5-year periods, except for South Asia, which recorded increases during both periods. The largest declines were recorded by Eastern Europe (at a 6% rate since 1984 and 8% since 1990) and Central America (at 5.5% since 1984 and 13% since 1990).

East Asia is the largest region in terms of shares of world armed forces, with 33% of the total, followed by Western and Eastern Europe, with 14% and 13%, respectively, the Middle East, with 10%, and South Asia and North America, with 8-9% each. **The most dramatic change in shares occurred with Eastern Europe, which reduced its share of world armed forces by 7 percentage points over the decade.**

European Armed Forces

Military strength among European countries fell by an average rate of 4% during the decade and by 6% during the half-decade. In 1994 the region totaled 6.4 million soldiers, a 9% drop from the previous year and 33% less than the decade high 9.5 million set in 1987.

In 1994 Eastern and Western Europe together accounted for 27% of the world's total soldiers, compared to 34% in 1984. Eastern European armies fell at an annual rate of 8% during 1990-1994 and 6% during the decade. Western Europe, on the other hand, maintained a slower rate of decline of its military strength, with an annual average reduction of 3.4% during the latter five-year period and 2% during the decade.

Turkey has claim to the largest army within Western Europe, with 811,000 soldiers in 1994. This is an 18% increase from 1993 and accounts for 14% of Europe's total armed forces and 25% of Western Europe's. Turkey ranked seventh in the world in terms of total armed forces in 1994, followed by France at 11th, Italy at 13th, and Germany at 18th.

In addition to Turkey's relatively large increase in 1994, Portugal's armed forces rose by 54,000 soldiers and Sweden by 26,000. Germany's armed forces fell by 36,000 soldiers from 1993 to 1994, while the Italian and British armies fell by 14,000 each.

Western European members of NATO made up 63% of NATO's total strength in 1994, with the four largest armies of the alliance--Turkey, France, Italy, and Germany--providing 45%.

The region that showed the largest decline in armed forces was Eastern Europe, which reduced its total by .7 million from 1993 to 1994. This drop can be credited mainly to the large drop in Russia.

Russia possessed Eastern Europe's largest army in 1994, with 1.4 million soldiers. This total accounted for 22% of Europe's total military strength and 45% of Eastern Europe's. As stated above, Russia's army was the third largest in the world in 1994, despite a 38% reduction from 1993.

The Ukraine, with forces of about a half million in 1994, ranked second in Eastern Europe, fourth in Europe, and 12th in the World. No other Eastern European country ranked in the top twenty in terms of forces. Only three others--Poland, Romania and Serbia-Montenegro--possessed relatively large armed forces, with 255,000, 200,000, and 130,000 soldiers, respectively.

United States

The United States ranked as the world's second largest army in 1994, with a strength of over 1.7 million. This total accounts for 7% of the world's total military strength and 23% of all developed countries. Total U.S. forces have dropped steadily since peaking at 2.3 million in 1987. Over the decade armed forces fell at an annual rate of 2.5%, but the pace quickened over the latter half of the decade, at 6%. The United States accounts for over one-third of the total NATO forces, with the level of support from the United States to NATO consistently ranging from 36-38%.

Developing Country Trends

Developing country armed forces fell by some 560,000 soldiers from 1993 to 1994, with all but two developing regions--Subsaharan Africa and South Asia--experiencing drops in total forces in 1994. Of the other developing regions, Central Asian, Central American, and South American armed forces each fell by roughly 80,000 soldiers, East Asian by 58,000, and Middle Eastern by 43,000.

East Asia's 33% share of world armed forces is up three points from that recorded in 1984. The region's three largest armies--Mainland China, North Korea, and Vietnam--accounted for 64% of the region's military manpower in 1994, China alone accounting for 38%. Chinese armed forces, which total more than the region's next three largest armies combined--the two mentioned above and South Korea--declined by 1.2 million soldiers over the decade, at an annual rate of 3.5%. In 1994 alone its armed forces fell by 100,000.

In contrast to China's large declines in armed forces, Vietnamese, North Korean, and South Korean armed forces saw relatively no change in army size in 1994. **Both North and South Korean armed forces appear to be stable in terms of size, with 1.2 million and 750,000 soldiers, respectively. Vietnamese forces have remained stable at 857,000 since 1992**, following a five-year period of consecutive drops. Several East Asian countries experienced increases in 1994--Burma, Indonesia, Laos, Mongolia, and the Philippines--ranging from 2,000 to 14,000 soldiers.

Of the other armies of East Asia, China-Taiwan ranked 13th in the world in 1994, Burma, 15th, Thailand, 19th, and Indonesia, 20th.

The armies of the Middle East accounted for 10% of the world's total forces in 1994. The region's 2.4 million soldiers in 1994 were 1 million less than in 1990 when regional total armed forces peaked. (This sharp drop can be credited mostly to Iraqi reductions.) The Middle East reduced its total armed forces by roughly 43,000 soldiers from 1993 to 1994, this drop credited mostly to large Syrian reductions.

Egypt, Iran, and Iraq possess the region's largest armies, accounting for 57% of the regional total. The three also account for roughly 6% of the world total and 9% of the developing country total. **Iran maintains the tenth largest army in the world**, with 528,000 soldiers in 1994, **followed by Egypt and Iraq, ranked 13th and 15th in the world, respectively.**

Of all Middle Eastern countries, only three--Syria, Saudi Arabia, and Oman--reduced the size of their armies in 1994. Syrian armed forces fell by 88,000 soldiers, while Saudi Arabian forces went down by 8,000, and Omani forces went down by 4,000. Modest increases were recorded by Iraq, which went up by 18,000 soldiers to 425,000 and Lebanon, up 13,000 to 50,000. The increase in army size by the remaining countries ranged from 2,000 to 6,000 soldiers.

Table 3 Force Ratio Trends

	Amount			Growth Rate*	
	1984	1990	1994	Decade 84-94	2nd Half 90-94

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

South Asian armed forces totaled over two million soldiers in 1994, accounting for 9% of the world total and 14% of developing countries. As stated above, **South Asia was the only region** to experience growth during both the decade and half-decade period. The region's armed forces rose by 7,000 from 1993 to 1994. **The armies of India and Pakistan make up 89% of the region's total military strength, with India alone accounting for 63%.** India possesses the fourth largest army in the

world, with 1.3 million soldiers. Pakistan now claims the ninth largest, with 540,000. In 1994 Indian armed forces rose by 40,000, while Pakistani armed forces fell by an almost equal amount.

Bangladesh continues to grow in terms of military strength. The size of the Bangladeshi army increased steadily throughout the decade at an annual rate of 3%. Armed forces totaled 113,000 soldiers in 1994, up slightly from 1993.

The remaining five developing regions of the world--North and Sub-Saharan Africa, South and Central America, and Central Asia--made up just over 12% of the world's total armed forces in 1994. Of all countries within these regions, no armies ranked in the top twenty.

Force Ratios

The ratio of a country's armed forces to its population provides a useful indicator of national military burden and effort. A comparison of trends in armed forces, population, and the resulting "force ratio" shows some significant differences between developed and developing countries and sharp differences among regions (Table 3 above; see also Figure 18, column 1).

The force ratio for the world declined at a moderate 3.5% rate during the decade and more rapidly at 5% during 1990-1994, falling to four soldiers per thousand people in 1994 from six soldiers in 1984. Developing countries had a ratio of 3.5 in 1994, compared to seven for developed countries. Force ratios of both groups fell over the decade, with the annual rate of decline slightly higher for developed countries during both the decade and half-decade period.

In 1994, the Middle East had the highest force ratio of any region with 11.3, followed by Eastern and Western Europe with 9.0 and 7.4, respectively, North Africa with 6.2, and North America with 5.2. The remaining regions had force ratios of less than five.

North Korea had the world's largest army relative to its population in 1994, with 52 soldiers per thousand population (see Country Rankings). Four other East Asian countries--Taiwan and Singapore (20), South Korea (17), and Brunei (14)--were also leading countries in terms of this ratio.

Five of the top ten countries in terms of the force ratio measure were of the Middle East region. Israel ranked second in the world with 37, Jordan followed with 25, and the United Arab Emirates, Syria, and Iraq each had a ratio of 21. Four other Middle Eastern countries--Qatar (19), Libya (16), Oman (15), and Bahrain (14)--ranked in the top twenty.

Both India and Pakistan have relatively small armies in comparison to population. In 1994 Pakistan ranked 85th in the world with a ratio of 4 soldiers per 1000 people, while India followed at 136th with a ratio of 1.4.

Arms Transfers

Figure 6. The World Arms Trade, 1961-1994

The world arms trade fell in 1994 to \$22 billion, a \$6.4 billion or 22% drop from the previous year and a 73 % fall from the all-time peak of \$83 billion a decade earlier in 1984 (in constant 1994 dollars-Figure 6 and Main Table II). The average annual rate of decline was 12% for the entire decade, which increased to 19% in the latter half, 1990-1994 (Table 4, next page). The decline has been continuous since 1987, with the largest single year drop being 31%, from 1990 to 1991. (The 1994 total of \$22 billion is the same as that reported in the previous edition of WMEAT for 1993, but the latter is here revised upward to \$28.6 billion for several reasons-see box.)

World arms sales agreements (as distinct from actual deliveries-that is, exports or imports) also declined generally over the decade from their 1985 peak of \$73 billion to a low of \$33 billion in 1992, returning to \$46 billion in 1993 and falling again to \$38 billion in 1994. Agreements-more erratic and less reliably estimated than deliveries-have been especially volatile recently in the United States, where they fell to \$15 billion in 1992, rose to \$31 billion in 1993, and dropped again to \$15 billion in 1994 (in current dollars-Main Table IV).

Note:

- Total arms imports equal arms exports at the world level (only).
- Initial estimates of arms trade aggregates for the latest year are based on incomplete data and tend to rise when reestimated in subsequent editions.
- With this edition, the scope of U.S. arms exports is expanded to include exports of military services under the FMS program. (See Statistical Notes, Arms Transfers)
- The "Developed" and "Developing" groups of countries have been modified by moving eight countries from the latter to the former and one country, the reverse. (See Statistical Notes, Coverage...)

Arms Import Trends

The decline in the arms trade took place in both developed and developing groups of countries (redefined in this edition-see Note in Arms Transfers section and Figure 7). Arms imports of the developing group have declined continually and sharply since 1987, falling to \$12.8 billion in 1994, or 80% below the 1984 all-time peak of \$63 billion. This decline has exceeded that of the developed group, which fell 61 % from its 1987 all-time peak of \$23.8 billion to \$9.3 billion in 1994, after a slight rise in 1993.

The differing patterns of decline of the two groups have resulted in a marked shift in their market shares. The developing group accounted for some 70-80% of the world market from the late 1970s to the peak year 1987 but has dropped to around 55% of the market in recent years, while the developed group rose accordingly, from 24% in 1984 to 42% in 1994 (Table 4).

Overview of Regions

The declining trends in arms imports occurred in all major regions, both over the entire decade and in the latter half, but the rates of decline differed greatly (Table 4 and Figure 8). In five of the regions-Middle East, East Asia, Western Europe, North America, and Oceania-the rates of decline have been relatively moderate, while in the remaining six regions the declines have been rapid to very rapid. **As a result, the first three-Middle East, East Asia, and Western Europe-have been the dominant importing regions and have increased their share of the much diminished world market from 62% in 1984 to 75% in 1994 (Figure 9, page 12).** With North America (essentially the United States), **which has become the fourth largest importing region, these four regions accounted for over 80% of the market in 1994.** Of the others, Eastern Europe dropped from fourth with 8.5% in 1984 to tenth with 1% in 1994 and Subsaharan Africa remained the fifth largest market, though its share dropped from 8% to 4%.

Since year-to-year fluctuations in the arms trade can be large, the market shares over the cumulative 1992-1994 period are also informative; in this case a similar picture emerges (in millions of current dollars-based on Main Table III):

Middle East	\$34,055	43%
Western Europe	13,350	17
East Asia	12,210	16
North America	5,080	6
South Asia	2,520	3
Africa, All	2,305	3
Eastern Europe	1,535	2
All Others	7,560	10
World	78,615	100

* Average annual rate, calculated as a compound rate curve fitted to all points (see Statistical Notes for details).

The Middle East

Although the Middle East remains by far the largest regional market at 41% of the world, its arms imports fell in 1994 for the fourth consecutive year, to slightly over \$9 billion. This total is less than one quarter of that recorded in 1984, the region's peak year in arms purchases, and a drop of 26% from 1993. The region averaged a 12% annual decline since 1984 and 15% since 1990.

Arms purchase agreements by Middle East countries also fell in 1994, to \$16 billion, after rising to a decade high \$22 billion in 1993. These changes are mainly attributable to the dramatic spike in US agreements with the Middle East in 1993. France also brought large shifts, as its agreements with the Middle East rose from \$1 million in 1992 to \$3.6 billion in 1993 and \$10.2 billion in 1994. Import agreements with France in 1994 accounted for 64% of the total.

Over the decade all Middle East countries experienced declining trends in arms imports except for

Bahrain, Cyprus, and the United Arab Emirates. All but Egypt Israel, Lebanon, and Oman declined during the latter half. During this latest period, trends among Middle East countries varied widely. Egypt was the sole country to record consecutive increases in imports during the latter years of the decade, while Syria and the United Arab Emirates recorded consecutive declines. Jordan and Lebanon's imports fell early in the decade then rose during the latter part of this period. Sporadic rises and falls among the remaining countries make trends difficult to discern.

Figure 7. World Arms Imports, 1984-1994

Figure 8. Arms Imports by Region, 1984-1994

Figure 9. Regional Shares of the World Arms Import Market, 1984-1994

The largest arms importers in the Middle East during 1992-1994 were the following (in millions of current dollars; Main Table III):

Saudi Arabia	\$20,465	60%
Egypt	4,060	12
Israel	2,970	9
Kuwait	2,040	6
Iran	1,765	5
Others (10)	2,755	8

These five leading countries together accounted for 92% of the over \$34 billion worth of weapons and military equipment imported into the region during this period.

Saudi Arabia continues to dominate the Middle East region as well as the world in terms of arms imports. In 1994 it imported some \$5 billion worth, roughly \$4 billion more than Egypt, the next largest importer, and 57% of the regional total (Figure 10). However, this total marks a second consecutive drop in purchases for the Saudis and amounts to 47% less than the 1984 peak year's \$10 billion. Other leading arms purchasers during this period were Israel (\$3 billion, 9% of the market), Kuwait (\$2 billion, 6%), and Iran (slightly under \$2 billion, 5%). The remaining ten countries combined accounted for 8% of the regional total.

In 1994 Egypt surpassed the United States as the world's second leading arms importer (Figure 11, page 14). As noted above, Egypt is the only Middle East country to have increased its arms purchases yearly since 1990. Its \$1.5 billion in imports in 1994 was roughly 70% higher than its 1990 total. **Israeli arms purchases totaled \$1 billion in 1994, making it the fourth largest importer in the region and fourth in the world (tied with South Korea).** However, this total is an 11% drop from the previous year, following modest increases in both 1992 and 1993. Other leading importers in the region are Iran, ranked 12th in world arms imports in 1994, and Kuwait, ranked 19th.

The United States, the number one supplier, provided over \$17 billion in weaponry to the region during 1992-1994, more than half of the total (Main Table III). The United States' largest trade partners in the region were Saudi Arabia (\$8.6 billion), Egypt (\$3.8 billion), Israel (\$2.6 billion), and Kuwait (\$1.8 billion). **The United Kingdom was the second largest supplier during this period,**

exporting some \$10 billion in arms into the region and accounting for roughly 28% of the region's total. The United Kingdom provided Saudi Arabia with 46% of its military purchases during 1992-1994, which accounted for almost all of the United Kingdom's arms exports into the region. Together, these two supplied the Middle East with 80% of all arms purchased in the period.

Figure 10. Middle East Arms Import Market, 1994

Of the remaining suppliers, **Russia provided the Middle East with 5% of total imports in 1992-1994, Canada, China, and France each provided roughly 3%, and Germany, 1%.** The largest recipients from these suppliers were Iran (\$1 billion from Russia and \$525 million from China), Saudi Arabia (\$900 million from Canada and \$525 million from France), Israel (\$310 million from Germany), and Syria (\$300 million from Russia).

Trends within Europe

Western Europe, with imports totaling over \$13 billion, was the second largest arms importing region in 1992-1994 (although East Asia became the second largest importing region in 1994). Western European imports made up 15% of the world's and 92% of Europe's as a whole, compared to 9% and 51% respectively in 1984. Western predominance over the Eastern half began in the late 1980's when large consecutive reductions in Eastern European purchases were coupled with increases in Western Europe's. Thus, the two components imported nearly equally over 1984-1987, but Western Europe's share of the European total became 60% in 1987, 75% in 1989-1990, 99% in 1992, and 92% in 1994. **Hungary was Eastern Europe's only major arms recipient during the 1992-1994 period, with 61% of the total, a result of its arms-for-debt agreement with Russia.**

Western European imports have also fallen considerably over the decade, averaging an annual decline of 6% since 1984 and 20% since 1990. The \$3.4 billion in 1994 purchases was 69% less than the almost \$11 billion in 1989, the region's peak year. **NATO member countries were responsible for 94% of the region's imports in 1994. Of these, Turkey was the sixth largest arms buyer in the world in 1994 with \$950 million and, with slightly over \$3 billion in purchases in 1992-1994, accounted for 23% of the region's total.** Germany and Greece both recorded \$1.8 billion in imports during this same period, followed by Spain with slightly over \$1 billion. These four received almost 60% of all arms imported into the region during the three-year period. Western Europe's three mid-level spenders-Finland (\$815 million), Netherlands (\$700 million), and the United Kingdom (\$695 million)-accounted for an additional 17%.

Also among the world's top importers in 1994 were Spain (\$525 million) ranking tenth, Portugal (\$320 million), 15th, Greece (\$270 million), 16th, and Germany (\$240 million), 20th.

The United States was the chief exporter of arms to Western Europe during 1992-1994, supplying over \$8 billion worth or 61% of the total. Canada was the only other significant supplier outside of Western Europe itself, providing \$640 million or 5% of the total, with almost all going to Germany. Arms trade within the region amounted to 30% of the total, due mainly to German and French sales of \$1.4 and \$1.2 billion, respectively.

East Asia

East Asia was the third largest regional market in 1992-1994, with over \$12 billion in imports, more than 15% of the world total. In 1994 East Asia surpassed Western Europe to take second place among importing regions, as already noted. The region's arms imports dropped steadily since peaking in 1987 at almost \$10 billion, to \$4 billion in 1993, then leveled off with a slight increase in 1994. Arms purchases fell at an annual rate of 8% over the decade and 12% during the half-decade. Although showing a declining trend, arms imports here were more level across the decade than in other regions. Only Western Europe (5.6%) and North America (6.4%) had lower rates of decline during the decade.

East Asia's four key importers during 1992-1994-South Korea (\$3 billion), China-Taiwan (\$2.4 billion), Japan (\$2 billion), and China-Mainland (\$1.7 billion)-accounted for 74% of the region's total arms purchases. China's inclusion in this group is mainly a result of its large purchases of over \$1.2 billion in 1992; since then China's imports have declined dramatically. In 1994 alone, South Korea ranked fifth in the world (tied with Israel), with \$1 billion, China-Taiwan ranked seventh, with \$775 million, and Japan ranked eighth, with \$650 million. North Korea, which imported large totals prior to the Soviet breakup, now imports minimal amounts of weapons.

Figure 11. Leading Arms Importers, 1994

The United States was the major supplier to East Asia during 1992-1994, providing 54% of all arms imported into the region. Nearly all of Taiwan's and Japan's and 44% of South Korea's purchases during this period were provided by the United States. Russia and Germany were the next largest suppliers, providing roughly 15% and 11% of the total. Nearly all Russian arms sold to the region were purchased by China, while Germany provided South Korea half of its total.

South Asia

South Asia's arms import market peaked at almost \$9 billion in 1989, but it has recorded large drops since, falling by 94% to \$540 million in 1994. Over the decade arms imports fell annually by 19% and 48% annually since 1990. India and Afghanistan have historically been the region's largest arms importers, each purchasing massive amounts of weaponry during the early part of the decade. Both countries cut their arms purchases dramatically in the latter years of the decade, with Afghanistan recording almost zero imports, following the breakup of the Soviet Union. Pakistan now shares with India the role of major arms importer in the region, although both imported relatively small amounts of weapons in 1994, \$260 and \$140 million worth, respectively. In terms of the world's leading arms importers, Pakistan ranked 18th and India, 28th. Over the 1992-1994 period both India and Pakistan recorded purchases of over \$1 billion, and together they made up 91 % of the region's total.

Russia and China are the primary suppliers of arms to South Asia, providing 78% of the region's total imports, with nearly all going to the two leading recipients.

Africa

African arms imports as a whole fell steadily throughout the decade, by roughly 25% annually, to a low of \$0.6 billion in 1993, then rose in 1994 to \$1.2 billion. This reversal in 1994 was due mainly to a large increase in Angola's arms imports, although North African imports also rose significantly. In 1994 Africa accounted for just over 5% of the world arms imports, compared to a 13% share in 1984.

Subsaharan Africa accounted for roughly three quarters of all imports into the continent during 1992-1994. Angola, ranked ninth in the world in 1994, accounted for half of these arms purchases, with \$865 million. Nigeria, Rwanda, Sudan, and Zimbabwe accounted for another 26%. Morocco imported roughly half of North Africa's \$600 million in military weapons during 1992-1994.

The sources of arms supplied to Africa are more diverse than for other regions of the world. Overall, Russia was the main supplier during 1992-1994, providing 26% of the total. The remaining shares were spread among the United States (17%), France (11%), China (8%), and the United Kingdom (6%). Other Western Europe and Middle East nations provided 11% and 7%, respectively.

Go to  [Next Page](#)  [Main Table of Contents](#)  [ACDA Homepage](#)

Arms Export Trends

World arms exports and world arms imports are opposite sides of the coin at the world level and behave identically, with matching drops in volume and annual rates of decline. Thus, as with total imports, **total exports declined by almost 73% since the beginning of the decade.** *As with world imports, the declines are subject to some upward revision in the latest years in future editions.*

This declining trend can be credited to both the developed and developing country groupings, here considered as arms exporters rather than importers and, as noted above, redefined in this edition. (See Statistical Notes, Coverage ...) Total arms exports by developed countries in 1994 were 72% less than in 1984 and by developing, 80% less. Over the decade arms exports fell by an annual rate of 12% for developed countries and 16% for developing. However, during the most recent five-year period, annual rates of decline for the two groupings switched in terms of pace. Arms exports fell by an annual rate of 19% for developed countries and 13% for developing (Table 5 and Figure 12).

Developed countries dominate the market in terms of arms exports, providing 93% of all weapons in 1994.

Figure 12. World Arms Exports, 1984-1994

The \$21 billion exported in 1994 was a drop of \$6.5 billion from 1993 and \$54.4 billion from 1984. On the other hand, the \$1.6 billion in arms provided by developing countries in 1994, 7% of the world total, was a slight increase of \$75 million from 1993. Aside from this increase, developing exports recorded consecutive drops since peaking at over \$8 billion in 1988, when they accounted for 11% of the world total. (For trends in exports by region, see Figure 13.)

Figure 14. World Arms Export Shares, 1992-1994

Overall in 1994 there were a total of 53 suppliers exporting arms to some 99 recipients. Only four developed countries-Iceland, Ireland, Luxembourg, and New Zealand-exported zero arms. Of the ten largest arms suppliers in 1994, all but China, with about \$800 million, were developed countries. Some 23 other developing countries exported arms in 1994, the next largest being Qatar, with \$130 million.

The ten largest suppliers in the world accounted for 93% of the total arms exports in 1994. **The top five-United States, United Kingdom, Russia, China, and France provided 84%** (Table 6 and Figure 15).

United States

Note: With this edition, the scope of U.S. arms exports is expanded to include exports of military services under the FMS program. (See Statistical Notes, Arms Transfers)

The United States continued to be the dominant supplier of arms to the world, providing exactly one half of the total in 1992-1994 (Figure 14) and well over half in 1994 (56%). US exports have fallen consistently during the decade, at an average rate of 4% since 1984 and 8% since 1990, from a high of almost \$21 billion in 1987 to a low of \$12.4 billion in 1994. However, the rate of decline for the United States, though quickening during the latter half of the decade, is much slower than for the world.

Of the over \$39 billion in weapons exported by the United States to the world during 1992-1994, half went to developed and half to developing countries. Of the half going to developed countries, 41% was delivered to NATO members.

Figure 15. Leading Arms Exporters, 1994

The Middle East is the main recipient of American arms. During 1992-1994 the region imported \$17.6 billion in arms from the United States; this amounted to 45% of total US exports, 52% of the region's imports, and more than double the amount exported to Western Europe. The four largest recipients of the region-Saudi Arabia, Egypt, Israel, and Kuwait-continued to be the United States biggest customers. Together, they imported nearly \$17 billion in U.S. arms during 1992-1994, 95% of the entire region's imports from the United States and 50% of its total purchases. Of this amount, Saudi Arabia alone purchased \$8.6 billion, or over half.

Western Europe imported over \$8 billion in weaponry from the United States during 1992-1994, second only to the Middle East. This amounts to 61% of total arms purchased by the region. Key purchasers Turkey (\$2.5 billion), Germany (\$1.1 billion), Spain (\$825 million), and the Netherlands and United Kingdom (\$675 million each) -accounted for 71 % of all US shipments into the region and 43% of its total imports. Turkey's \$2.5 billion alone accounted for 31% of US sales to Western Europe. In contrast, the United States provided only \$25 million in arms to Eastern Europe during this period.

The United States exported some \$6.6 billion in arms to East Asia in 1992-1994. Of this amount, 85% went to three recipients-China-Taiwan (\$2.4 billion), Japan (\$1.9 billion), and South Korea (\$1.3 billion). **All of Taiwan's and almost all of Japan's arms purchases were provided by the United States.** Exports to South Korea were shared equally between the United States and Germany.

Oceania (mainly Australia) imported over \$0.9 billion worth of US arms during the period. US exports to the other regions-South America, Central America, North and Sub-Saharan Africa, South Asia, Eastern Europe, and Central Asia-ranged from \$0.4 billion to nil and totaled \$0.8 billion.

Shown in Table 7 is the United States share of regional arms imports, cumulative for 1992-1994, by delivery and agreement sales (Table III). Noteworthy is the high U.S. share of regional arms import agreements in Oceania (80%), Western Europe (75%), Middle East (53%), and East Asia (49%).

Eastern Europe	0	0
Oceania	75	80

Western and Eastern Europe

European countries provided 35% of total world arms purchases in 1994, down seven percentage points from their share in 1993 (Table 8). Total arms exports fell annually by 18% during the decade and 29% during the last half of the decade. As expected, these declines can be credited mostly to Eastern Europe, whose arms sales fell much faster, declining at 26% during the decade and dramatically at 42% since 1990, compared to the Western half's 10% and 19% rates, respectively. Eastern Europe supplied only 9% of the world market in 1994, compared to a share in the high-to-mid-thirties during most of the eighties. Eastern Europe's sales of \$2 billion in 1994 represented a 95% drop from the 1987 peak year amount of \$34.7 billion.

Russia is the key supplier of arms in Eastern Europe, with \$1.3 billion in deliveries in 1994 or over two-thirds of the region's total, though sales remain drastically lower than during the period of Soviet dominance (Figure 16). Over most of the decade, the Soviet Union maintained a stable share of the world's exports at 32-39%, but fell to 21% in 1991. Successor Russia's share plummeted to 8% in 1992, then rose to 11% in 1993 before falling again to 6% in 1994. In addition to Eastern Europe, the largest recipients of Russian arms have been in East Asia, which imported almost \$2 billion during 1992-1994, and the Middle East, importing \$1.6 billion. China (\$1.7 billion), Iran (\$1 billion), India (\$925 million), and Hungary (\$825 million) were Russia's largest importers of arms during this period. The Czech Republic is the next largest arms exporter of the region with \$300 million in sales in 1994. **From the world perspective, Russia was the third largest arms exporter in 1994, while the Czech Republic was in eighth place.**

Western Europe is now the second largest arms exporting region, accounting for 26% of the total world market in 1994. That was down slightly from the previous two years and on a par with its share at the beginning and middle of the decade (Table 8). The traditionally high arms exporting countries of the United Kingdom, Germany, and France continued to rank high. Over the last three years of the decade, these three made up almost one quarter of total world sales, while the remaining 17 Western European countries accounted for only 5%. Together they accounted for 63% of total European and 84% of Western European exports in 1994. In 1994 the United Kingdom (\$3.4 billion) ranked second in the world in terms of total arms exported, France (\$800 million) was tied with China at fourth, and Germany (\$700 million), ranked sixth.

The United Kingdom's arms sales peaked at \$6.4 billion in 1987 and have dropped steadily since, to a low of \$3.4 billion in 1994. **The United Kingdom has nevertheless become the region's leader in arms sales.** The 1994 amount accounted for 44% of Europe's total arms sales and 58% of Western Europe's, compared to 5% and 13% for the same groupings in 1984, respectively.

The United Kingdom's key arms recipient is Saudi Arabia, which imported \$9.4 billion, or 75% of all UK exports during 1992-1994. The next largest recipient was the United States, with imports of \$1.4 billion.

Germany's \$700 million in sales in 1994 was a 60% drop from the previous year's \$1.7 billion and a 83% drop from the 1984 peak year. In 1994 Germany accounted for 12% of Western Europe's arms sales. During 1992-1994 Germany exported \$3.7 billion in arms, mainly to other Western European countries (\$1.4 billion) and East Asia (\$1.3 billion). South Korea was the largest importer with \$1.2

billion in purchases during this period, followed by Greece (\$470 million), the United States (\$370 million), Switzerland (\$360 million), Israel (\$310 million), and Finland (\$280 million).

Table 8

Other NATO Europe	23	8	12	11	12
Share of Eastern Europe's Arms Exports					
USSR/Russia	82	95	87	90	69

French arms sales plummeted at a 21% annual rate over the decade and 38% during the most recent five year period. French exports fell steadily between 1984-1989, rose dramatically to \$5.5 billion in 1990, and have recorded steady drops since. In 1994 these sales made up 14% of Western European exports, compared to 37% in 1984. In 1992-1994 France sold over \$3 billion in arms mainly to its Western European neighbors (\$1.2 billion) and the Middle East (\$985 million). Sales to Saudi Arabia were \$525 million during this period, accounting for 17%. Greece and Switzerland (\$360 million each), and Finland (\$320 million) together accounted for one-third of total French sales during the three-year period.

In terms of the share of exports going to developing countries in 1992-1994, the United Kingdom rated a very high 83% due to large Saudi purchases, compared to France's 58%, the United States' 50%, and Germany's 10%.

Table 9 shows the major shifts that have taken place in the supply of arms to the developing countries as a group. Thus, the top suppliers at the beginning and end of the decade had the following ranks and shares of that market (in percent):

	1984	1994
United States	2) 14	1) 43
United Kingdom	6) 3	2) 22
Soviet Union/Russia	1) 38	3) 10
China	5) 5	4) 6
France	3) 12	5) 5
Germany	4) 6	6) 1

Table 9
Share of Total Arms Exports to Developing Countries (in percent)

	United States	United Kingdom	USSR/ Russia	China	France	(West) Germany
1984	14	3	38	5	12	6
1985	15	3	38	2	18	2
1986	15	7	46	3	10	1
1987	14	9	47	5	5	2
1988	11	9	49	7	3	2
1989	13	12	49	7	4	1
1990	18	11	43	4	14	1
1991	27	17	31	6	6	5
1992	41	22	12	5	4	1
1993	44	22	13	7	3	1
1994	43	22	10	6	5	1
1984-94	19	10	39	5	8	2

The United States has replaced the Soviet Union/Russia as the leading supplier, and the United Kingdom has surpassed both Russia and France to rise from sixth to second place. Both Russia and France have much-reduced shares, Russia dropping to third and France to fifth.

Developing Country Exporters

Developing countries exported roughly \$1.6 billion in arms in 1994. The grouping's share of world exports has been below the 10% mark throughout the decade, except 1988 when the share rose to 11.5%, then dropped as low as 5% in 1993 before rising to 7% in 1994. Over the decade, developing country arms exports dropped annually by an average 16% and 13% since 1990. The volume of exports has tapered off substantially since the early-to-mid 1980s, to a point where only a handful of countries play significant roles in exporting weapons, the dominant one being China.

China continues to be in a class by itself in terms of developing country arms exports, although it too recorded sharp declines in exports during the latter portion of the decade. Since peaking at over \$3.6 billion in 1988, sales dropped steadily (excluding a small increase in 1993), to roughly \$1 billion in the last three years. China, with \$800 million in 1994 arms sales, tied with France as the world's fourth leading arms exporter. China exported some \$2.8 billion in weaponry during 1992-1994, about 4% of total world sales, 94% of this amount going to developing countries. The main recipients were Pakistan (\$875 million), Iran (\$525 million), Burma (\$300 million), and Saudi Arabia (\$170 million), together, accounting for two-thirds of China's total.

Qatar (\$130 million), Iran (\$90 million), Brazil and Moldova (\$80 million each), and the Ukraine (\$60 million) also were among the top twenty exporters in 1992-1994.

Number of Weapons Delivered

Another measure of the arms trade besides the total dollar value of all arms exports is the number of units of major weapons transferred. This indicator shows a similar picture of a major downturn in recent years. The number of weapons by major type delivered to all developing countries over the last four three-year periods are as follows (in units; Table V).

	1983-85	'86-88	'89-91	'92-94
	-----	-----	-----	-----
Land Armaments				

Tanks	6,211	3,970	4,110	1,794
Artil., Field and Anti-Air	12,850	7,391	5,084	2,644
Armored Pers. Carriers	11,640	7,841	5,893	2,994
Naval Craft				

Major Surface Combatants	52	20	27	31
Other Surface Combatant	300	208	145	117
Submarines	9	17	6	5
Missile Attack Boats	34	5	9	12
Aircraft				

Combat Aircraft, Supers.	1,453	805	992	345
Combat Aircraft, Subsonic	280	160	190	94
Other Aircraft	1,000	799	487	364
Helicopters	1,155	824	681	295
Surface-to-Air Missiles				

	20,181	14,035	6,863	3,247
Total, all types	55,165	36,075	24,487	11,942

The overall pattern of decline for worldwide deliveries by type is similar among the periods (and for other periods since the late 1970s), indicating that the downturn in transfers of weapons has been across the board. A 78% decline in gross numbers was recorded between the first and last periods.

Such broad quantity measures, of course, can obscure the large variability in size, complexity, and military effectiveness that is possible within a single weapon type/supplier/year combination as well as across these three dimensions. Nonetheless, the quantity of transfers by weapon type can be a useful indication of the flow of arms.

The Soviet Union supplied by far the largest number of weapons to all developing regions over the 12-year period, though its existence ended in 1991. Soviet transfers predominated in most weapon types as well for each of the three-year periods (Table 10 and Main Table V). The last period of the decade, 1992-1994, saw a more even distribution among the key suppliers, with the United States having a 24% share, Russia 22%, France 15%, and China 11%. Remarkably, the United Kingdom, the second leading exporter to developing regions in current dollar terms, supplied only a 1% share of the market in unit terms.

Regional Recipients

The Middle East received the largest number of major weapons over the entire 12-year period, with 55,970 units supplied to the region, 44% of the total supplied to developing countries (Table V). Of these weapons, 31,888 were land armaments, 304 were naval craft, 2,961 were aircraft, and 20,817 were surface-to-air missiles. Roughly 28% of the major arms supplied to the Middle East during the decade came from the Soviet Union, 14% from the United States, 12% from China, and 8% from France. During 1992-1994 the Middle East remained the leading importer of total weapons with 5,893 major weapons delivered, 49% of the total (Figure 17). However, the distribution of suppliers to the Middle East has changed dramatically over the decade, with the United States providing 37% of the total, France 20%, Russia 13% and China 2% in the latter period.

In terms of the entire period South Asia became the second largest recipient of major weapons, with 25,782 imported into the region, followed closely by Africa with 24,266, each accounting for roughly 20% of total transfers. The supply of arms to South Asia, historically dominated by the Soviet Union, experienced a large decline in deliveries during 1992-1994. The region now depends primarily on Russia and China for its weapons, the two combined making up a 77% share of the 1,403 weapons delivered during this period. Of these weapons, 950 were land armament weapons, 13 were naval craft, 100 were aircraft, and 340 were surface-to-air missiles.

African imports, dominated as well by the Soviet Union during the decade, also fell dramatically during the later three-year period, a drop that appears to be a continuance of a trend started prior to the breakup. There were 1,678 weapons delivered to Africa during 1992-1994, compared to 12,390 during 1983-1985. Of those delivered in the later period, 1,510 were land armament weapons, 32 were naval craft, 116 were aircraft, and 20 were surface-to-air missiles.

Over the decade East Asia imported 13,027 major weapons, only 10% of the total. However during 1992-1994, the region was the second largest importer when 1,860 weapons went to the region, 16% of the total. Of these, 401 were land armaments, 54 were naval craft, 309 were aircraft, and 1,096 were surface-to-air missiles. The United States was the major supplier to the region, providing roughly one-third of the total throughout the early part of the decade, but this share fell during the last three year period to 25%.

Major weapons supplied to Latin America made up 7% of the world total during the entire decade and 9% during the last three-year period. The Soviet Union was the leading supplier of major weapons to Latin America during the decade, accounting for 57% of the total, but in 1992-1994 the developing country grouping excluding China led the market, providing 36% of the total. This group was followed by Russia with 32%, and the United States with 10%.

Figure 17. Number of Arms Delivered to Developing Regions

Military Burden and Other Relative Indicators

Relative Burden

In addition to military expenditures, armed forces, and arms transfers, which serve as absolute measures of military effort, it is useful at times to compare these measures to other variables to obtain relative indicators of military effort. One such indicator, the force ratio, or the ratio of armed forces to population, is highlighted above under Armed Forces (Main Table I and Figure 18, first column). Another commonly used relative measure is the burden ratio, or the ratio of military expenditures to gross national product (ME/GNP; Figure 18, column two).

Figure 18
Relative Indicators - 1994 (all value figures in 1994 dollars)

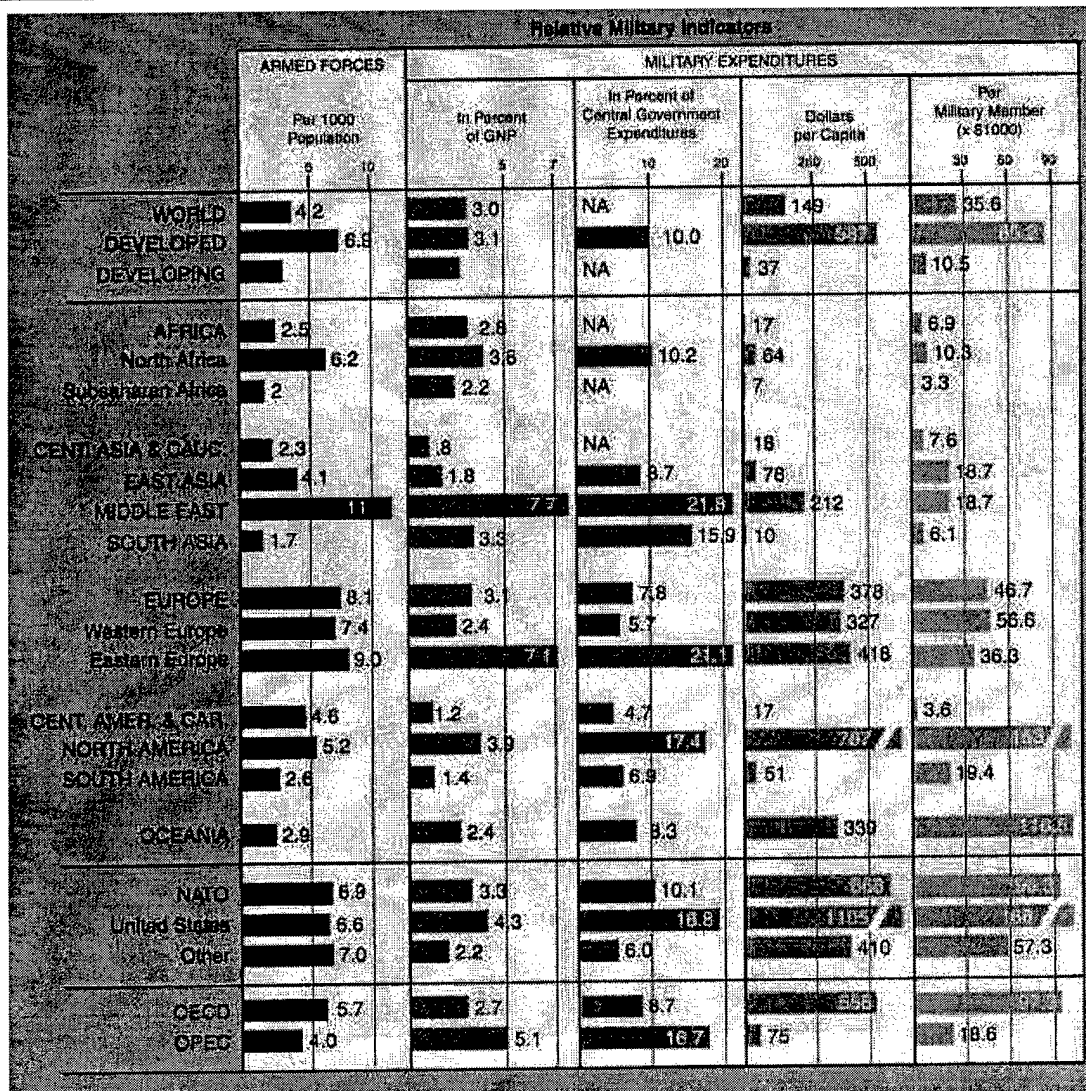

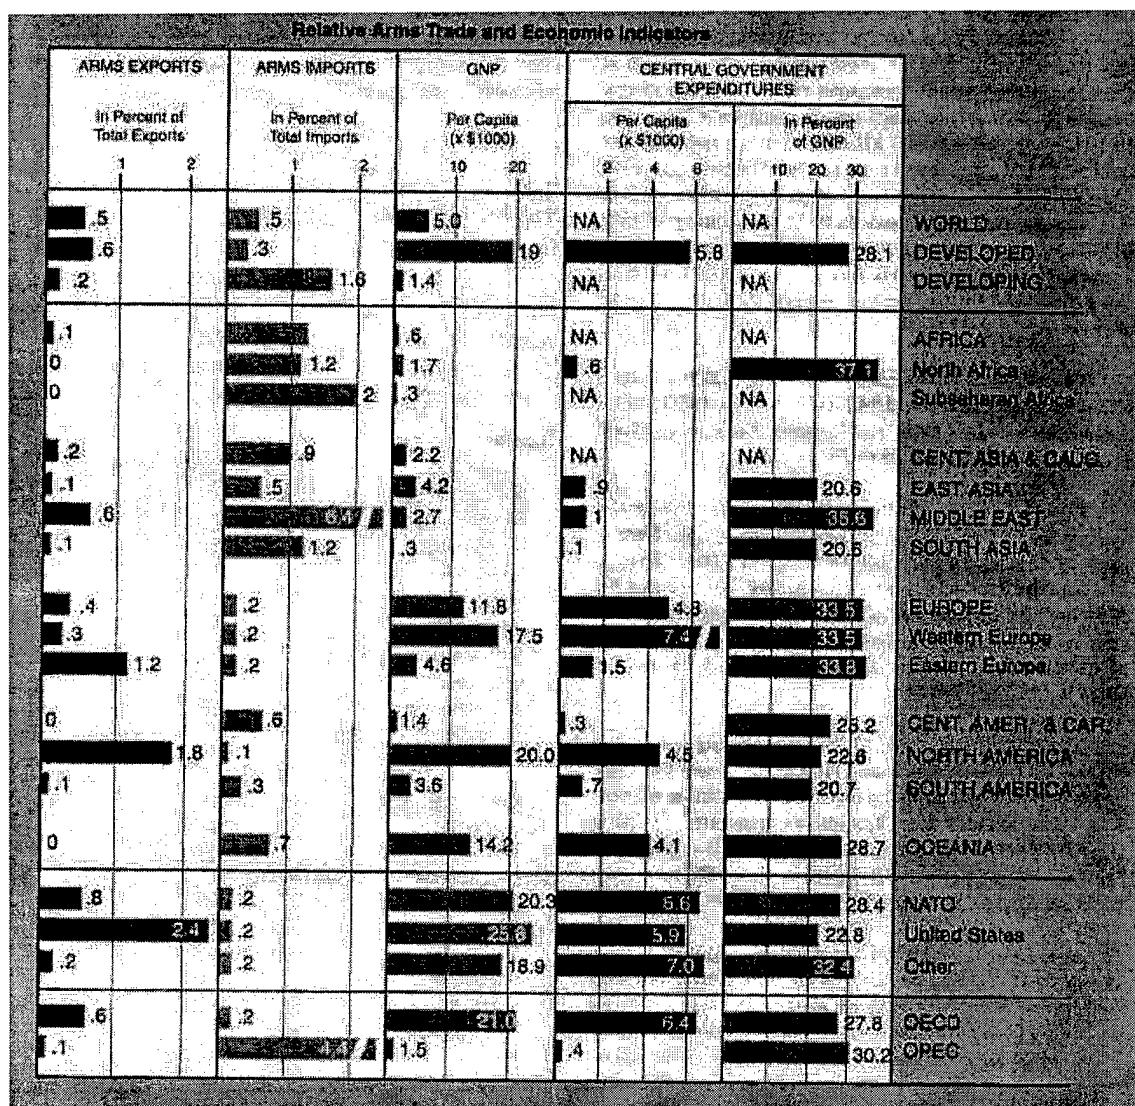

Figure 18 - continued
Relative Indicators - 1994 (all value figures in 1994 dollars)

Average Relative Indicators

The basic economic variables (population, GNP, central government expenditures (CGE), and total trade) contained in the Main Statistical Tables together with the military variables (military expenditures (ME), armed forces, and arms trade) make it possible to calculate a variety of useful ratios or relative indicators. Ten such average indicators for 1994 are presented in Figure 18, to facilitate both inter-group comparisons for a given indicator and an overview of all the indicators for a given group. Besides the usual groupings, U.S. and non-U.S. NATO subgroupings are also shown.

The average indicators in Figure 18 are calculated as the ratio of the group total for the numerator to the group total for the denominator. Such a ratio is equivalent to the weighted value of individual country values, with the denominator variable being the weighing factor. Consequently, the shift from 1993 to 1994 exchange rates is likely to result in changes in the relative weights of countries and may also cause changes in some group indicator levels from those shown in WMEAT 1993-94. See Statistical Notes, Conversion...to Dollars, for a discussion of the impacts of the shift in the exchange rate.

The ME/GNP Ratio

The burden ratio for the world fell to 3% in 1994, a new low for the decade (as well as for the

entire period since 1960) and a drop of 2.5 percentage points from the decade-peak 1984 level (Table 11 and Main Table I). This drop is due to the declining burden ratios in both the developed and developing countries. The ME/GNP burden for developing countries has fallen consistently over the decade, from 6.1% in 1984 to 2.6% in 1994, except for an increase in 1990. For the developed, the ratio has fallen from 5.5% to 3.1%.

Estimates of the burden ratio for most of the former Warsaw Pact countries and successors states after the collapse of the Soviet Union continue to be very rough and highly tentative; they should be treated with extra caution. Estimates reported here are often derived from a variety of sources that may not be consistent either within or among themselves as to relationships among variables or over time. In particular, the nominal ME/GNP burden ratios shown here for Russia in 1992 (16.3%), 1993 (14.3%), and 1994 (12.4%) may be somewhat high; **other respectable sources estimate the ratio for Russia to be in the vicinity of 10% or below.** Consequently, the burden ratio for those country groupings in which Russia has a large weight, such as Eastern Europe and the former Warsaw Pact, may also be overstated.

The Western Europe burden ratio has fallen from a decade high 3.4% in 1984 to 2.4% in 1994. The estimated burden ratio for Eastern Europe declined from roughly 12% in 1984 to 7% in 1994.

The ratio for NATO as a whole declined over the decade by one and one half percentage points, from a high of almost 5% in 1986 to 3.3% in 1994. Greece (5.6%), the United States (4.3%), and Turkey (4.1%) recorded the highest ratios of all NATO countries. The ratio for the US fell steadily since peaking at 6.6% in 1986, to 4.9% in 1991, then rose slightly in 1992 to 5.1% and fell again in 1993 and 1994.

The Middle East ratio (7.7%) was the highest of any region in 1994; it and Eastern Europe were the only regions of the world to record ME/GNP ratios of over 5%. The Middle East has shown dramatic declines annually from the very high ratios in the high-to-mid teens recorded during the 1984-1991 period. The 1994 ratio is 10 percentage points down from 1984's 18% in the peak year.

A handful of Middle East countries-Kuwait (11%), Oman (18%), Saudi Arabia (18%), and Yemen (14.5%)-recorded ratios of 10% or higher in 1994. Of the remaining countries, Bahrain recorded a ratio of 6.4% in 1994, while all other countries' ratios were 5% or lower. Iran's ratio of 2.4% in 1994, though roughly estimated, shows a continued decline from its decade high of 11% recorded in 1986, 8.3 percentage points fewer than in 1994.

Five of the nine countries in the world with estimated ME/GNP ratios of over 10% were in the Middle East-the four mentioned above plus Iraq, whose absolute values are highly estimated. Bosnia and Herzegovina, North Korea, and Russia are the remaining three countries with ratios reaching this level.

Figure 19 cross classifies all countries in 1994 according to both burden ratio and income level, as measured by GNP per capita. The widespread scatter of countries throughout the entire matrix suggests that income level or stage of development is not a critical determinant of the burden ratio. Involvement in civil or external war, military threats by neighbors, or over-emphasis on military power are probably more relevant.

Table 11
The Burden Ratio: ME/GNP (In percent)

	1984	1990	1992	1994
World	5.5	4.4	3.6	3.0
Developed	5.4	4.4	3.6	3.1
Developing	6.1	4.5	3.6	2.6
Region				
Middle East	17.9	16.5	14.5	7.7
Eastern Europe	11.8	9.7	9.4	7.1
North America	5.7	5.0	4.6	3.9
North Africa	9.5	5.2	4.5	3.8
South Asia	3.8	3.5	3.0	3.3
Oceania	2.5	2.3	2.4	2.4
Western Europe	3.4	2.9	2.6	2.4
Subsaharan Africa	3.3	3.0	3.9	2.2
East Asia	2.5	2.0	1.8	1.8
South America	2.4	1.9	1.6	1.4
Central America & Car.	3.9	2.8	1.4	1.2
Central Asia & Cauc.	---	---	1.2	.8
Europe, all	6.6	5.2	3.9	3.2
Africa, all	5.5	4.0	3.8	2.8
Organization / Reference Group				
OECD	3.7	3.2	2.9	2.7
OPEC	12.6	12.0	10.6	5.1
NATO, all	4.8	4.2	3.8	3.3
Warsaw Pact (fmr)	12.1	9.8	8.6	6.6
NATO Europe	3.5	3.0	2.7	2.5
Latin America	2.1	1.6	1.3	1.2
CIS	---	---	10.8	8.5

In accord with the generally declining tendency of the burden ratios in recent years, the most dense cells in the matrix have moved downward toward lower burden ratios. In comparison to the similar chart for 1993 in WMEAT 1993-1994, there were two fewer countries with estimated ME/GNP ratios of over 10% in 1994 and nine fewer with ratios between 5-10%. The number of mid-ratio countries, with ratios of 2-5%, stayed the same in 1994, while there were four more countries with ratios of 1-2% and six more with ratios of under 1%.

The ME/CGE Ratio

The percentage of central government expenditures spent on defense (ME/CGE) is another useful measure of military effort. It complements the ME/GNP ratio and can show a differing comparative burden level from the latter, since the ratios of CGE to GNP varies considerably. For example, ratios for ME/CGE in 1994 ranged from almost 22% in the Middle East to roughly 5% in Central America (Figure 18, column three and Table 12). Use of the ME/CGE ratio as a measure of military effort is limited in this edition by the lack of 1994 central government expenditures data for countries of Subsaharan Africa and Central Asia, resulting in aggregate data not being available for those regions and the developing and world totals.

For developed countries the ME/CGE ratio fell only slightly to 10% from 1993. This continues a decade long downward trend from the early part of the decade, which had ratios reaching in the high teens.

Figure 19. Relative Burden of Military Expenditure--1994

ME/GNP* (%)	GNP PER CAPITA (1994 dollars)					
	Under \$200	\$200-499	\$500-999	\$1,000-2,999	\$3,000-9,999	\$10,000 and over

Warsaw Pact (fmr)	43.2	36.6	17.2	21.52
NATO Europe	8.5	7.6	6.5	5.8
Latin America	7.8	6.5	6.3	6.0
CIS	---	---	18.6	---

In 1994 ratios fell for all regions of the world except Eastern Europe (up six percentage points) and South Asia (up .9).

The Middle East ranks as the leader in terms of this ratio with 22% in 1994, just slightly higher than Eastern Europe's 21%. The ME/CGE ratio for the Middle East fell 4.3 percentage points from 1993, while Eastern Europe's rose by 5.9 points. Over the decade both regions showed much higher ME/CGE ratios than other regions; the Middle East ratio reached as high as 50% before beginning a decline in 1992 and Eastern Europe peaked at 43%.

Other regions to record ME/CGE ratios of over 10% in 1994 were North America (17.4%), South Asia (15.9%), and North Africa (10.2%).

ME per Capita

The military expenditures per capita ratio, another complementary measure of military burden or effort, also shows a wide gap between developed and developing countries (Figure 18, column four). The gap amounted to \$550 in 1994 when the measure averaged \$587 for developed and \$37 for developing countries. This gap has narrowed steadily over the decade, with the ratio falling faster for developed countries.

In 1994, North America led the world's regions in terms of this ratio with \$787, followed at a distance by Eastern Europe (\$418), Oceania (\$339), and Western Europe (\$327). The lowest ratios were recorded by Subsaharan Africa (\$7), South Asia (\$10), Central America (\$17) and Central Asia (\$18). The four countries topping the list were Kuwait (\$1,838), Israel (\$1,304), United States (\$1,105), Brunei (\$1,087), and Singapore (\$1,072).

ME/AF Ratio

Military expenditures per member of the armed forces (ME/AF) is a different kind of relative indicator. Rather than burden, it measures the level of armament and military effort per soldier (to the extent that the dollar values of military expenditures, usually exchange-rate-converted, succeed in measuring that effort accurately).

In terms of this indicator, developed countries in 1994 (averaging \$85,200) exceeded the developing countries (averaging \$10,800) by roughly 8 times, with a difference between the two groups of \$74,400 (Figure 18, column five).

In 1994, the highest regional ratios were again recorded by North America (\$153,000). Oceania and Western Europe followed with ratios of \$116,500 and \$57,000, respectively. All other regions recorded ratios below \$50,000.

Eleven countries spent over \$100,000 per soldier in 1994, including the developed countries of Western Europe, the United States, Canada, Japan, and Australia, and the high income Middle Eastern countries of Kuwait and Saudi Arabia (see Country Rankings).

Arms Trade/Total Trade

The drastic decline in the arms trade in recent years coupled with the moderate increase in total trade caused the ratio of the two measures to drop substantially—from a world average of 3.1% in 1984 to .5% in 1994. In terms of its 4 main components, this ratio looks as follows (in percent; Main Table I):

	Developed	Developing
Arms imports/total imports:		
1984	0.9	11.8
Peak	.9 ('84-7)	11.8 ('84)
1994	.3	1.6
Arms exports/total exports:		
1984	3.6	1.4
Peak	3.6 ('84)	1.6 ('88)
1994	.6	.2

Over the decade, all four of the above component ratios were reduced by two-thirds and more. Most notable are the average 85% drops from their peak years in the arms exports/total exports ratio for both the developing and developed countries and in the arms imports/total imports ratio for developing

countries.

Other Indicators

GNP per capita for the world as a whole fell during 1990-1993, rising only slightly in 1994 to \$5,366. The ratio for both developed and developing countries continued an upward trend in 1994, growing at roughly the same pace over the decade at 2.5%. The ratios grew slightly faster during the latter half of the decade at about 3.6%. In 1994, the developed countries peaked at \$19,050 and the developing countries at \$1,388 (Main Table I).

Over the decade, declining rates were experienced by Africa (1%), the Middle East (2%), Central America (3%), and Eastern Europe (7%).

ESSAYS

The past year saw two important developments in the policy of the United States Government regarding the control of conventional arms and associated dual-use goods and technologies. The first, in February 1995, was the formulation and issuance by the White House of the President's major new statement of overall U.S. policy governing exports, or "transfers," of conventional arms (see Note 1). The second, in December 1995, was the reaching of an international agreement on the initial framework of the "Wassenaar Arrangement," a new, global regime to increase transparency and responsibility of trade in conventional arms and dual-use goods and technology. It succeeds the so-called "COCOM" (see Note 2) regime for multilateral controls on exports to communist countries during the Cold War.

The U.S. Arms Control and Disarmament Agency, along with the Departments of State, Defense, and Commerce, took part in the formulation, negotiations, and implementation of these new policies and actions. They are described in the following sets of documentary and discussion texts regarding each of the two developments.

Note 1 - Statement by White House Press Secretary Michael McCurry and fact sheets released by the White House, Office of the Press Secretary, February 17, 1995. Discussion by the Weapons Technology and Control Division, Nonproliferation and Regional Arms Control Bureau, ACDA.

Note 2 - The Coordinating Committee for Multilateral Export Controls. See "The Wassenaar Arrangement," below.

The President's Policy on the Transfer of Conventional Arms

Statement of Policy

The President has approved a comprehensive policy to govern transfers of conventional arms. This policy, as detailed in the attached fact sheets, serves our nation's security in two important ways. First, it supports transfers that meet the continuing security needs of the United States, its friends, and allies. Second, it restrains arms transfers that may be destabilizing or threatening to regional peace and security.

This policy reflects an approach toward arms transfers that has guided the Administration's decisions over the last two years. Specifically, the United States continues to view transfers of conventional arms as a legitimate instrument of U.S. foreign policy-deserving U.S. Government support- when they enable us to help friends and allies deter aggression, promote regional security, and increase interoperability of U.S. and allied forces. Judging when a specific transfer will meet that test requires examination of the dynamics of regional power balances and the potential for destabilizing changes in those regions. The criteria guiding those case-by-case examinations are set forth in the attached guidelines for U.S. decision-making on conventional arms transfers.

The centerpiece of our efforts to promote multilateral restraint is our initiative to work with allies and friends to establish a successor regime to COCOM. The new regime should establish effective international controls on arms sales and the transfer of sensitive technologies-particularly to regions of tension and to states that pose a threat to international peace and security. While pursuing multilateral restraint through this and other mechanisms, such as the UN Conventional Arms Register and regional initiatives, the United States will exercise unilateral restraint in cases where overriding national security or foreign policy interests require us to do so.

Fact Sheet: Conventional Arms Transfer Policy

The U.S. conventional arms transfer policy promotes restraint, both by the U.S. and other suppliers, in transfers of weapons systems that may be destabilizing or dangerous to international peace. At the same time, the policy supports transfers that meet legitimate defense requirements of our friends and allies, in support of our national security and foreign policy interests.

Our record reflects these considerations. U.S. arms sales remain close to our historical average, approximately \$12 billion in government-to-government sales agreements in FY 1994. U.S. arms deliveries have also remained flat. Sales and deliveries have been primarily to allies and major coalition partners such as NATO member states and Israel.

U.S. Goals

The policy issued by the President will serve the following goals:

- **To ensure that our military forces can continue to enjoy technological advantages over potential adversaries.**
- **To help allies and friends deter or defend themselves against aggression, while promoting interoperability with U.S. forces when combined operations are required.**
- **To promote regional stability in areas critical to U.S. interests, while preventing the proliferation of weapons of mass destruction and their missile delivery systems.**
- **To promote peaceful conflict resolution and arms control, human rights, democratization, and other U.S. foreign policy objectives.**
- **To enhance the ability of the U.S. defense industrial base to meet U.S. defense requirements and maintain long-term military technological superiority at lower costs.**

Supporting Arms Control and Arms Transfer Restraint

A critical element of U.S. policy is to promote control, restraint, and transparency of arms transfers. To that end, the U.S. will push to increase participation in the UN Register of Conventional Arms. We will also take the lead to expand the register to include military holdings and procurement through national production, thereby providing a more complete picture of change in a nation's military capabilities each year.

The U.S. also will support regional initiatives to enhance transparency in conventional arms—such as those being examined by the OAS and ASEAN—and will continue to adhere to the London and OSCE guidelines, while promoting adherence to such principles by others.

The United States will continue its efforts to establish a successor export control regime to the Cold War-era COCOM. Our goals for this regime are to increase transparency of transfers of conventional arms and related technology, to establish effective international controls, and to promote restraint—particularly to regions of tension and to states that are likely to pose a threat to international peace and security.

The United States will also continue vigorous support for current arms control and confidence-building efforts to constrain the demand for destabilizing weapons and related technology. The United States recognizes that efforts such as those underway in the Middle East and Europe bolster stability in a variety of ways, ultimately decreasing the demand for arms in these vital regions.

The United States will act unilaterally to restrain the flow of arms in cases where unilateral action is effective or necessitated by overriding national interests. Such restraint would be considered on a case-by-case basis in transfers involving pariah states or where the U.S. has a very substantial lead on weapons technology; where the U.S. restricts exports to preserve its military edge or regional stability; where the U.S. has no fielded counter-measures; or where the transfer of

weapons raises issues involving human rights or indiscriminate casualties, such as anti-personnel landmines.

Finally, the U.S. will assist other suppliers in developing effective export control mechanisms to support responsible export policies. The United States also will continue to provide defense conversion assistance to the states of the former Soviet Union and Central Europe as a way of countering growing pressures to export.

Supporting Responsible U.S. Transfers

Once an approval for a transfer is made, the U.S. Government will provide support for the proposed U.S. export. In those cases, the United States will take such steps as tasking our overseas mission personnel to support overseas marketing efforts of American companies bidding on defense contracts, actively involving senior government officials in promoting sales of particular importance to the United States, and supporting official Department of Defense participation in international air and trade exhibitions when the Secretary of Defense, in accordance with existing law, determines such participation to be in the national interest and notifies Congress.

Decision-making on U.S. Arms Exports: Criteria and Process

Given the complexities of arms-transfer decisions and the multiple U.S. interests involved in each decision, decisions will continue to be made on a case-by-case basis. These case-by-case reviews will be guided by a set of criteria that draw the appropriate balance between legitimate arms sales to support the national security of our friends and allies and the need for multilateral restraint against the transfer of arms that would enhance the military capabilities of hostile states or that would undermine stability.

Go to [Next](#) [Next Page](#) [Contents](#) [Main Table of Contents](#)  [ACDA Homepage](#)

Fact Sheet: Criteria for Decisionmaking on U.S. Arms Exports

Given the complexities of arms-transfer decisions and the multiple U.S. interests involved in each arms-transfer decision, the U.S. Government will continue to make arms-transfer decisions on a case-by-case basis. These reviews will be guided by the criteria below.

General Criteria

All arms-transfer decisions will take into account the following criteria:

- **Consistency with international agreements and arms control initiatives.**
- **Appropriateness of the transfer in responding to legitimate U.S. and recipient security needs.**
- **Consistency with U.S. regional stability interests, especially when considering transfers involving power projection capability or introduction of a system which may foster increased tension or contribute to an arms race.**
- **The degree to which the transfer supports U.S. strategic and foreign policy interests through increased access and influence, allied burden sharing, and inter-operability.**
- **The impact of the proposed transfer on U.S. capabilities and technological advantage, particularly in protecting sensitive software and hardware design, development, manufacturing, and integration knowledge.**
- **The impact on U.S. industry and the defense industrial base whether the sale is approved or not.**
- **The degree of protection afforded sensitive technology and potential for unauthorized third-party transfer, as well as in-country diversion to unauthorized uses.**
- **The risk of revealing system vulnerabilities and adversely impacting U.S. operational capabilities in the event of compromise.**
- **The risk of adverse economic, political, or social impact within the recipient nation and the degree to which security needs can be addressed by other means.**
- **The human rights, terrorism, and proliferation record of the recipient and the potential for misuse of the export in question.**
- **The availability of comparable systems from foreign suppliers.**
- **The ability of the recipient effectively to field, support, and appropriately employ the requested system in accordance with its intended end use.**

Upgrade Criteria

Upgrades of equipment-particularly that of former Soviet-bloc manufacture-is a growing segment of the market. The U.S. Government should support U.S. firms' participation in that market segment to the extent consistent with our own national security and foreign policy interests. In addition to the above general criteria, the following guidelines will govern U.S. treatment of upgrades:

- **Upgrade programs must be well defined to be considered for approval.**
- **Upgrades should be consistent with general conventional arms transfer criteria outlined above.**
- **There will be a presumption of denial of exports to upgrade programs that lead to a capability beyond that which the U.S. would be willing to export directly.**
- **Careful review of the total scope of proposed upgrade programs is necessary to ensure that U.S. licensing decisions are consistent with U.S. policy on transfers of equivalent new systems.**
- **U.S. contributions to upgrade programs initiated by foreign prime contractors should be evaluated against the same standard.**
- **Protection of U.S. technologies must be ensured because of the inherent risk of technology transfer in the integration efforts that typically accompany an upgrade project.**
- **Upgrades will be subject to standard U.S. Government written end-use and retransfer assurances by both the integrator and final end user, with strong and specific sanctions in**

- place for those who violate these conditions.
- **Benchmarks should be established for upgrades of specific types of systems, to provide a policy baseline against which 1) individual arms transfer proposals can be assessed and 2) proposed departures from the policy must be justified.**

DISCUSSION

In February 1995, the White House announced the President's Conventional Arms Transfer (CAT) Policy, which emphasizes multilateral restraint, set forth criteria for case-by-case decision-making on U.S. arms exports, and continues support for transfers that serve U.S. interests.

The policy's balancing of foreign policy and national security interests gives a prominent place to arms control. Its criteria for evaluating proposed transfers explicitly include arms control and regional stability considerations. The policy emphasizes a number of arms control and nonproliferation objectives, including the need to:

- preserve regional military balances, prevent the proliferation of weapons of mass destruction, promote peaceful conflict resolution and arms control, and support regional stability;
- maximize transparency, responsibility, and restraint wherever possible;
- expand and increase participation in the UN Register of Conventional Arms, and support similar regional initiatives;
- create a new post-COCOM regime-the first multilateral export control regime concerned with the regional security implications of transfers of arms and sensitive dual-use technology (see "Wassenaar Arrangement," below);
- continue our strong support for ongoing regional arms control, confidence-building measures, and defense conversion efforts;
- seek other opportunities to develop and pursue multilateral restraint measures as well as regional arms control initiatives;
- maintain unilateral arms export restraints in several areas.

ACDA played an integral part in the development of the Administration's policy. The same will be true of its implementation, where ACDA will continue to subject proposed U.S. arms transfers to a rigorous arms control evaluation, as required by statute. Further, in response to the changing world situation and in an effort to bring more focus to the new CAT policy, ACDA and other agencies have been developing "regional" policies that take into account the specific situation encountered in each area. Such policies clarify the pros and cons of potential transfers in view of the regional dynamic, avoiding the pitfalls of piecemeal approaches and resulting in more proactive and consistent arms transfers decisions. In 1995 our effort focused on developing such policies for Central Europe, South America, Southeast Asia, and the Middle East.

The Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies*

Final Declaration (of the Parties)

1. Representatives of Australia, Austria, Belgium, Canada, the Czech Republic, Denmark, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Japan, Luxembourg, The Netherlands, New Zealand, Norway, Poland, Portugal, the Russian Federation, the Slovak Republic, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States met in Wassenaar, the Netherlands, on 18 and 19 December 1995.

2. The representatives agreed to establish *The Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies*.

3. The representatives established initial elements of the new arrangement, to be submitted to their respective Governments for approval.

4. They also established a Preparatory Committee of the Whole to start work in January 1996.

5. The Representatives agreed to locate the Secretariat of *The Wassenaar Arrangement* in Vienna, Austria. The first plenary meeting will take place in Vienna on 2 and 3 April 1996.

Fact Sheet (Department of State)

Twenty-eight countries agreed today in the Hague to establish the Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies. They will form for the first time a global multilateral regime covering both armaments and sensitive dual-use goods and technology. The arrangement will respond to the new security threats of the post Cold War by providing greater openness through information sharing about arms and technology transfers worldwide.

The regime will focus on the threats to international and regional peace and security. A central part of the regime is the commitment by its members to prevent the acquisition of armaments and sensitive dual-use items for military end-users to states whose behavior today is, or becomes, a cause for serious concern, such as Iran, Iraq, Libya and North Korea.

The regime will also undertake to prevent destabilizing accumulations of conventional arms worldwide. The Iraqi war taught us that indiscriminate exports of conventional weapons and sensitive dual-use technologies can pose serious threats to our interests, foreign policy goals, and to international security. This regime will seek to apply the lessons of Iraq to prevent similar destabilizing build-ups. The Wassenaar Arrangement will also fill an important gap in the global non-proliferation regimes by covering conventional arms and associated dual-use technologies. It will encourage adherence to the current non-proliferation regimes by requiring its members to adhere to those regimes.

The arrangement seeks to prevent destabilizing buildups of weapons by establishing a formal process of transparency, consultation, and where appropriate, multilateral restraint. Participants have agreed to control through their national policies those items and technologies contained in a list of Dual-Use Goods and Technologies and a separate Munitions List.

It meets the basic objectives of the U.S. to move forward and begin cooperation with the other countries in the arrangement, but it still does not meet all of our expectations with respect to openness and restraint. We will now seek to incorporate additional provisions in the arrangement to address these problems.

*** Declaration of the Parties and Department of State fact sheet issued December 9, 1995.**

DISCUSSION

In response to the changed world situation following the end of the Cold War, the 17 members of the Coordinating Committee for Multilateral Export Controls, better known as COCOM (most NATO countries, Australia, and Japan), agreed that its purpose of controlling advanced technology exports to communist nations had become outdated. At the Vancouver Summit in 1993, Presidents Clinton and Yeltsin agreed that the regime should be replaced with a new, non-discriminatory arrangement, to be joined by Russia. The COCOM partners decided to terminate the regime as of March 31, 1994, and to create such a new arrangement to enhance openness worldwide in the transfer of arms and sensitive technologies. Since that decision, ACDA has been a part of the U.S. Government effort, along with other like-minded nations, to establish the new regime on a consensus basis.

The current group of participating countries, as listed above in the Final Declaration, has been expanded from the original 17 COCOM members. As of April 1, 1996, it now numbers 31 with the addition of Argentina, Austria, the Czech Republic, Finland, Hungary, Ireland, New Zealand, Poland, Romania, the Russian Federation, the Slovak Republic, South Korea, Sweden, and Switzerland. Other countries currently seeking membership include Bulgaria and Ukraine.

Membership is open on a global and nondiscriminatory basis to all countries meeting the established criteria, under which a member country is to:

- be a producer/exporter of arms or associated dual-use goods and technology;
- have appropriate national policies, such as not selling arms or sensitive dual-use items to countries whose behavior is a cause for concern;
- adhere to international nonproliferation norms and guidelines; and
- implement fully effective export controls.

The following address details the provisions of the Wassenaar Arrangement thus far and discusses U.S. objectives for it's further evolution.

The Wassenaar Arrangement*

***An address by Lynn E. Davis, Under Secretary of State for Arms Control and International Security Affairs, given to the Carnegie Endowment for International Peace, Washington D.C., on January 23, 1996.**

In December 1995, twenty-eight governments agreed to establish a new international regime to increase transparency and responsibility for the global market in conventional arms and dual-use goods and technologies. The official name of the regime is "The Wassenaar Arrangement on Export Controls for Conventional Arms and Dual-Use Goods and Technologies"-Wassenaar being the town outside The Hague where five rounds of negotiations took place over the past two years.

The Wassenaar Arrangement is just an initial international framework that will need to be elaborated and defined more fully. But it already represents some notable achievements for U.S. foreign policy. For the first time there is a global mechanism for controlling transfers of conventional armaments, and a venue in which governments can consider collectively the implications of various transfers on their international and regional security interests. In view of the close association between advanced technologies, including production technologies and modern battlefield weapons, sensitive dual-use commodities will receive the same measure of scrutiny as do arms.

Moreover, the preliminary scope of international support for this enterprise is already quite broad. Our friends and allies in Europe and in the Pacific comprise the core membership, but Russia and the four Visegrad states of Central Europe have also joined as full members.

The composition and the goals of The Wassenaar Arrangement are tailored to respond to the new security threats of the post-Cold War world, and will close a critical gap in the international control mechanisms which have concentrated on preventing the proliferation of weapons of mass destruction and their delivery systems. While The Wassenaar Arrangement will not duplicate the other nonproliferation mechanisms, it will through a variety of means complement and, where necessary, reinforce them.

Restraint in Trade to Pariahs

Even before its establishment, the regime has served to attract countries worldwide wishing to join the first post-Cold War security framework.

To meet the membership criteria, they have taken steps to adhere to the policies of the other non-proliferation regimes and to establish effective export controls. Most importantly, all of the participating countries currently maintain national policies to prevent transfers of arms and sensitive technologies for military purposes to the four pariah countries-Iran, Iraq, Libya, and North Korea. This is a critical requirement that the United States insisted on-and will continue to insist on-in examining the credentials of new members.

The United States has sought and obtained commitments through sensitive, high-level negotiations that produced bilateral agreements with Russia and other prospective members to close down their arms sales to Iran and forego any new contracts involving arms and arms-related technologies. By requiring responsible arms transfer policies as a condition for membership, the new regime furthers our international security interests and the security of longstanding allies, such as Israel and South Korea, who live in dangerous neighborhoods.

Further, The Wassenaar Arrangement calls for enhancing cooperation among the participants to prevent the acquisition of armaments and sensitive dual-use items for military enduses if the situation in a region or the behavior of a state is or becomes a cause for serious concern to the participating states. The transparency provisions in the new arrangement and our own national technical means will give us confidence that current policies of restraint toward the pariah countries are continuing and that future transfer policies remain consistent with this goal.

Does this mean that we have bridged our differences with Europe over high technology sales to Iran? Unfortunately, we continue to have serious concerns with European policy in this area. What we have obtained to date is a growing recognition that certain levels of high technology trade, even when intended for civilian use, should not be carried on in secrecy.

When it comes to dangerous regimes like Iran, international transparency-and accountability-are necessary. The Wassenaar Arrangement will help advance that proposition through the initial information sharing measures. But, those measures need to go much further before we can say there are effective international guidelines in place that will prevent future tyrants from embarking upon the kind of military build-up that Saddam Hussein undertook before invading Kuwait.

Preventing Destabilizing Accumulations of Arms

Indeed, the Gulf War has been a critical factor shaping the U.S. negotiating positions, because it serves as a stark reminder of the dangers to international peace and security that can result from the destabilizing accumulations of conventional weapons and the indiscriminate export of arms and sensitive dual-use technologies. The case of Iraq showed us that often the only constraint on a state's ability to obtain dangerous arms is its ability to pay for them. Suppliers from both East and West, including our allies and American firms, contributed in different ways to Saddam Hussein's multibillion dollar military build-up.

How will this arrangement begin to help us prevent future Iraqs? During plenary discussions and working group meetings, governments will share intelligence on potential threats to international and regional peace and stability. They will look particularly at clandestine projects and dubious acquisition trends. They will also exchange specific information on a regular basis about global transfers to nonparticipating countries of certain sensitive dual-use goods and technologies. More than one hundred of these have been selected for this information sharing, including machine tools, computers, and telecommunications. The details of this special sensitive list will be published shortly.

Governments have agreed to notify denials of items on this list to non-participating states promptly on an individual, case-by-case basis and of transfers on an aggregate and periodic basis. They will also require notification of any transfers of any sensitive list item previously denied by another member state for an essentially identical transaction.

This transparency in the transfer of sensitive dual-use goods and technologies will help the new regime identify acquisition patterns that suggest emerging threats to regional and international peace. Transparency also allows countries to alert one another to export requests that warranted denials. This will help foster common and consistent export policies, while eliminating inadvertent undercuts by participants. Although all export decisions will remain fundamentally at the discretion of each country, transparency will enhance responsibility in arms transfers because countries will only go forward with those transfers that they are prepared to defend to the others in the arrangement.

We will obtain similar benefits from the transparency regime on the arms side. We will provide information on arms transfers on a weapons list, that initially will be composed of the categories of major weapons systems used for the CFE Treaty and the UN Arms Register. The information will come twice a year and include more details than previously available, such as descriptions of the

model and type of all weapons, except for missiles. And we have agreed as a priority to expand and redefine that list to cover more comprehensively the weapons of modern warfare.

In the cases of both armaments and dual-use items, governments will have the ability to request additional information on individual transfers through diplomatic channels.

In addition, The Wassenaar Arrangement is expected to provide for more intensive consultations and more intrusive information sharing among six major weapons suppliers- the United States, United Kingdom, Russia, France, Germany, and Italy.

From the United States perspective, we hope that this group will provide the means of defining common approaches to trade with regions of potential instability, such as the Middle East and South Asia. It could also include steps to enhance stability by preventing the introduction of sophisticated weaponry in certain parts of the world, where it currently does not exist. We have made some specific proposals to the other five suppliers concerning timely notification of shipments of major weapons and the development of measures to address situations of particular concern.

National Controls

As is the case for the Nuclear Suppliers Group, the Australia Group, and the Missile Technology Control Regime, The Wassenaar Arrangement is based on national controls. It is not directed against any state or group of states and will not impede bona fide transactions. Nor will it interfere with the rights of states to acquire legitimate means with which to defend themselves. Rather it is focused on the behavior of states, and especially on dangerous behavior.

Participants have agreed to control globally all items set forth on a basic list of dual-use goods and technologies and on a munitions list, with the objective of preventing unauthorized transfers or re-transfers of these items. The new arrangement will thus not involve license-free trade among the participants. Governments have also agreed to exercise extreme vigilance in trade on a very sensitive list of dual-use goods and technologies.

Controls of items on the various lists will be implemented through each of the participating country's laws and regulations. In the United States, most of the items covered under this arrangement are already subject to U.S. licensing requirements. Any modifications to U.S. regulations necessary to carry out the requirements of the arrangement will be published in the coming months.

Next Steps

The first plenary meeting of The Wassenaar Arrangement is slated for early April in Vienna. Vienna will be the home base for the regime and the site of a small secretariat to conduct day-to-day work. Member governments will use the intervening months to make preparations at the national level necessary to carry out the understandings they have reached and to work out the modalities for sharing information on specific transfers.

The Wassenaar Arrangement will be open, on a global and non-discriminatory basis, to all countries meeting the agreed membership criteria. There is a line forming of countries seeking membership, e.g., Argentina, South Korea, Romania, Bulgaria, and the Ukraine. We hope that some of these countries will have met the criteria by the time of our April plenary.

Perspective on the Arrangement

Although the COCOM parties were responsible for initiating development of The Wassenaar Arrangement, the successor regime differs significantly in its goals and procedures, given the changed strategic environment. COCOM was designed as an institution of the Cold War to

respond to the threat posed by the Soviet Union and its allies. The West sought to maintain its qualitative edge on the battlefield by a virtual prohibition on sales of arms to "communist countries" and by controlling the export of strategic products and technical data.

As the original threats of the Cold War diminished, new threats to global security began to emerge, including the spread of weapons of mass destruction and their delivery systems. This led the United States and other countries to develop worldwide non-proliferation regimes, such as the Nuclear Suppliers Group, the Missile Technology Control Regime, and the Australia Group. The Wassenaar Arrangement extends and complements this development. And it begins, as did these other regimes, with the initial elements essential to getting underway the practical work-frameworks, basic guidelines, and lists.

Although we are pleased that the regime will be up and running at the April plenary, I want to note quite frankly that the arrangement falls short of U.S. goals in some important areas. We need to go further.

Americans hold as a fundamental principle the importance of promoting international responsibility in arms transfers and in public accountability for these transfers. Not all participants in this arrangement share this view and some have consistently resisted comprehensive information sharing-even in diplomatic channels. Specifically, the United States found itself alone in supporting prior notification of transfers.

The United States also did not win support for focusing the information sharing on regions of instability and where the security risks are greatest, because participants raised political objections to "targeting" specific regions or countries. Instead, we will begin with a global exchange. As a result, we will share and obtain not only all of the information that we would have available through a regional focus, but additional information as well.

That said, The Wassenaar Arrangement provides an initial international framework to respond to the critical security threats of the post-Cold War world and to promote the overall non-proliferation and conventional arms transfer policies of the Clinton Administration. The realization of a broadly based multilateral arrangement covering conventional arms and dual-use commodities has only been possible through strong American leadership-leadership which must continue to ensure the further development of more specific measures in the new regime to meet the risks to international peace and stability around the world.

COUNTRY RANKINGS: 1994

As a statistical aid, the following tables show 167 countries of the world listed in descending order of their value for each of 6 absolute variables and 7 relative variables (or ratios) in 1994. The variable values are taken or derived from Main Statistical Tables I and II, below.

[This web version of the *WMEAT 95* shows only the rankings "index", which lists countries alphabetically and gives their rank for each variable. The printed version also contains a rank-order list of countries and values for each variable.]

Tables for Central Government Expenditures and its three relative variables have been excluded in this edition due to the lack of sufficient data for countries in Africa and Central Asia.

Users of these rankings should be aware that they are based on data whose accuracy is in many cases qualified, as indicated by markings in Tables I and II signifying "not available," "rough estimate," or "estimate." These tables and the Statistical Notes should be consulted in interpreting the rankings.

Entries marked "not available" ("NA") are based on very rough estimates. While it is considered preferable to include countries with such data in the rankings rather than omit them, these estimates should be understood as having a wide range of error above and below the estimated value, a range extending well beyond the level of neighboring countries in the rankings in most cases.

The variables, their abbreviations, and their data units are as follows:

Military expenditures (ME)	Millions of dollars
Armed forces (AF)	Thousands
Arms exports (AE)	Millions of dollars
Arms imports (AI)	Millions of dollars
Gross national product (GNP)	Millions of dollars
Population (POP)	Millions
GNP per capita (GNP/POP)	Dollars
ME/GNP	Percent
ME per capita (ME/POP)	Dollars
ME per soldier (ME/AF)	Dollars
Armed forces per 1,000 people (AF/POP) ..	Soldiers
Arms exports total exports (AE/TE)	Percent
Arms imports total imports (AI/II)	Percent

An "index" listing the countries alphabetically and showing each country's rank number for each variable may be found on the final pages of this set of tables. The symbol "+" indicates that the country's value for that variable is zero and the rank is actually a tie for last place.

NOTE: All monetary values are in 1994 dollars; for most countries, national currencies were converted at average annual 1994 exchange rates. It should be noted that country rankings can shift considerably from edition to edition due to changes in exchange rates and in the base year for conversion used in each edition. For a discussion of the impact of shifts in exchange rate base years, see *WMEAT 1988*, Statistical Notes, Conversion of National Currencies to Dollars.

E Estimate based on partial or uncertain data. NA Not available. 0 Nil
R Rough Estimate (see Statistical Notes).

- a In order to reduce distortions in grouped data trends caused by data gaps for indi (shown as "NAs"), the totals for the world, regions, and organizations include rou
- b Estimated by adding arms imports to data on military expenditures, which are belie However, it should be noted that the value of arms deliveries in a given year, as at current exchange rates), may differ significantly from actual expenditures on a
- c This ratio is calculated from the dollar values in previos columns. In most cases that could be calculated from national currency values, since both numerator and d converted into dollars by the same exchange rate or other conversion factor. In t the two variables are converted at differing rates, yielding a different ratio tha The ratio for Russia in rubles terms, for examble, is believed to be less than 10 Notes, Military Expenditures-to-GNP Ratio for further discussion.
- d This series or entry probably omits a major share of total military expenditures, expenditures on arms procurement. Table II shows estimated annual arms imports; that data in Table II represent the estimated value of arms delivered in a given y those arms.
- e Unified Germany as of 1991 is shown under West Germany; data for East Germany end
- f Some part of estimated total military expenditures may not be included in announce The ratio of ME to CGE therefore may be somewhat overstated.
- g Unified Yemen as of 1990 is shown under Yemen (Sanaa); data for Yemen (Aden) end i

E Estimate based on partial or uncertain data 0 Nil or negligible (\$2.5 million or less). NA Not available.

a To avoid the appearance of excessive accuracy, arms transfer data have been independently rounded, with greater severity for large numbers. Because of this rounding and the fact that they are obtained from different sources, world arms exports do not equal world arms imports.

b Total imports and exports usually are as reported by individual countries and the extent to which arms transfers are included is often uncertain. Imports are reported "cif" (including cost of shipping, insurance, and freight) and exports are reported "fob" (excluding these costs). For these reasons and because of divergent sources, world totals for imports and exports are not equal.

c Because some countries exclude arms imports or exports from their trade statistics

and their "total" imports and exports are therefore understated and because arms transfers may be estimated independently of trade data, the resulting ratios of arms to total imports or exports may be overstated and may even exceed 100 percent.

d In order to reduce distortions in trends caused by occasional data gaps, the totals for the world, regions, and organizations include rough approximations for those countries and years in which data are not available, and available data for years in which countries were not independent.

e Includes transfers to NATO agencies as such, which are not attributable to individual recipient countries.

f The estimated dollar values of the Soviet Union's arms exports in this and the previous five editions of this report are revised upward substantially from those in prior editions.

g Unified Germany as of 1991 is shown under West Germany; data for East Germany end in 1990.

h Includes major equipment purchased by the U.S. Army Corps of Engineers for use in military construction projects in Saudi Arabia, recorded in U.S. accounts as U.S. imports.

i US arms imports data shown in the last three editions has been revised upward substantially from previous editions. (See Statistical Notes, Arms Imports).

j The Yemens became unified on May 22, 1990. Arms purchases made by Unified Yemen following this date are shown under Yemen (Sanaa).

TABLE III. VALUE OF ARMS TRANSFER DELIVERIES, CUMULATIVE 1992-1994 (In millions of current dollars)

0 Nil or negligible (\$2.5 million or less). @
 Developed country (all others are "developing").
 # OPEC country. X
 Not applicable.

NOTE: To avoid the appearance of excessive accuracy, the entries in this table are independently rounded, with greater severity for larger numbers. Totals here are the sum of the rounded components.

a Comparable totals in tables III and IV do not agree precisely due to the fact that rounding was done at different stages of aggregation.

b US arms transfers to the World, Developed, and Developing groupings include transfers to NATO agencies as such and to other international agencies and classified transfers, which are not attributed to individual recipient countries or regions.

c Includes major equipment purchased by the U.S. Army Corps of Engineers for use in military construction projects in Saudi Arabia, recorded in U.S. accounts as imports to the U.S. These purchases, not attributable to individual supplier countries, are included under "Others".

--- \$3-50 million.

0 Nil or negligible (less than \$3 mill

- a Comparable totals in tables III and IV differ slightly due to the fact that roundi different stages of aggregation. The entry in the World column in table IV exceed the components in some rows due to certain imports by Saudi Arabia that cannot be specific suppliers. See table II, footnote g.
- b The estimated dollar value of the Soviet Union's arms exports in this and the prev editions are revised and substantially larger than those in earlier editions. For discussion, see Statistical Notes, Arms Transfers.
- c US arms transfers to the World, Developed, and Developing groups include those to as such and to other international agencies and classified transfers, which are no to individual recipient countries or regions..

TABLE V. Number of Major Weapons Delivered to Developing Regions, By Supplier and Weapon Type, Cumulative by Period

- Nil

a Suppliers include the five largest exporters of major weapons, as well as other major groups.

b Soviet weapon deliveries ended in 1991 in the main, although a small number were delivered in 1992 under prior-year agreement is attributed here to Russia.

c Totals include the "developing" countries, as previously listed in Table III, with the exception of those in Europe.

d Air defense artillery includes weapons over 23mm. Field artillery includes mobile rocket launchers, mortars, and recoilless rifles over 100mm.

e Major surface combatants include aircraft carriers, cruisers, destroyers, destroyer escorts, and frigates.

f Other surface combatants include motor torpedo boats, subchasers, and minesweepers.

g Other aircraft include reconnaissance aircraft trainers, transports, and utility aircraft.

STATISTICAL NOTES

These notes define the country groupings and variables employed in the Statistical Tables, identify the sources of information, and explain the methods of handling data. A primary aim is to inform the reader of the main qualifications to the data, much of which is not as accurate and reliable as uniform presentation in statistical tables may imply. This is particularly true of the data on military expenditures, armed forces, and arms transfers, which in many countries are subject to severe limitations of incompleteness, ambiguity, or total absence due to governmental secrecy.

Index

This index is provided as a means to quickly move to sections contained within this document.

Coverage and Groups of Countries

The statistical tables report data for 172 countries (167 in 1994), including most members of the United Nations as well as nonmembers Switzerland and Taiwan. UN members not covered are generally small and not considered militarily significant; relevant data for them are frequently unavailable (see note 1).

Countries are grouped into normally defined *geographical regions* with the following exceptions: Egypt is assigned to the Middle East rather than to Africa; and Oceania includes only Australia, New Zealand, Papua New Guinea, and Fiji. Note the following redefined and new regions beginning with *WMEAT 1993-1994*: Mexico has been added to Canada and the United States to form North America in the "NAFTA" sense; Central America and the Caribbean and South America replace Latin America; Central Asia and the Caucasus contains eight republics from the former Soviet Union (since 1992); Western Europe consists of NATO Europe plus Austria, Finland, Ireland, Malta, Sweden, and Switzerland; Eastern Europe contains the former Warsaw Pact countries plus Albania and the successors to Yugoslavia and the Soviet Union, except those republics from the latter that are detached to Central Asia and Caucasus. A full listing of specific countries in each region may be found in Main Statistical Table III (pages 153-157).

The following political and economic groups are included: NATO, the (former) Warsaw Pact, OPEC, and OECD. NATO (North Atlantic Treaty Organization) consists of Belgium, Canada, Denmark, France, West Germany, Greece, Iceland, Italy, Luxembourg, the Netherlands, Norway, Portugal, Spain, Turkey, the United Kingdom, and the United States. Spain joined in 1982, and its membership has since been reaffirmed. Although its participation is limited and still evolving, Spain has been included in the NATO grouping since *WMEAT 1991-1992*. France also limits its military participation (since 1966), but is traditionally associated with NATO and is therefore included in the group. The Warsaw Pact was formally dissolved on July 1, 1991. It consisted of Bulgaria, Czechoslovakia, East Germany, Hungary, Poland, Romania, and the Soviet Union. OPEC (Organization of Petroleum Exporting Countries) includes Algeria, Ecuador, Gabon, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, the United Arab Emirates, and Venezuela. OECD (Organization for Economic Cooperation and Development) comprises the NATO countries and Australia, Austria, Finland, Ireland, Japan, Mexico, New Zealand, Sweden, and Switzerland.

The 33-country *developed* group has been revised from the previous edition (primarily on the basis of GNP per capital) by shifting the Czech and Slovak Republics, Greece, Israel, Singapore, South Korea, and Taiwan from the developing group to the developed, and Romania from developed to developing. The developed group in this edition includes the following countries: all Western Europe except Malta and Turkey; in Eastern Europe, all former Warsaw Pact members (including Czechoslovakia's successors and Russia) except Bulgaria, Romania, and the successor states to the Soviet Union other than Russia; in East Asia, Japan, Singapore, South Korea, and ChinaTaiwan; in Oceania, Australia and New Zealand; and Israel and South Africa. The specific countries in each region classed as developed are so designated in Main Statistical Table III (pages 153-157).

All other countries are classified as *developing*. Besides the newly independent and transitioning economies (except Russia) coming out of the Soviet Union and Yugoslavia, this includes the other recently or presently *communist* countries of Albania, Bulgaria, Cambodia, Mainland China, Cuba, Laos, Mongolia, North Korea, Romania, and Vietnam, as well as all countries in Africa, Central Asia and Caucasus, Central and South America, South Asia, the Middle East except Israel, the rest of East Asia and Oceania, and Malta and Turkey in Western Europe.

Most of the data are for calendar years. For some countries, however, expenditure data are available only for fiscal years which diverge from calendar years. In such cases, the fiscal year which contains the most months of a given calendar year is assigned to that year; e.g., data for the fiscal year April 1993 through March 1994 would be shown under 1993. Data for fiscal years ending on June 30 are normally entered under the calendar year in which they end.

Sources and Definitions

Military Expenditures

For NATO countries, military expenditures are from NATO publications and are based on the NATO definition. In this definition, (a) civilian-type expenditures of the defense ministry are excluded and military-type expenditures of other ministries are included; (b) grant military assistance is included in the expenditures of the donor country; and (c) purchases of military equipment for credit are included at the time the debt is incurred, not at the time of payment.

For other non-communist countries, data are generally the expenditures of the ministry of defense. When these are known to include the costs of internal security, an attempt is made to remove these expenditures. A wide variety of data sources is used for these countries, including the publications and data resources of other US government agencies, standardized reporting of countries to the

United Nations, and other international sources.

It should be recognized by users of the statistical tables that the military expenditure data are of uneven accuracy and completeness. For example, there are indications or reasons to believe that the military expenditures reported by some countries consist mainly or entirely of recurring or operating expenditures and omit all or most capital expenditures, including arms purchases. In the case of several countries (Algeria, Chile, Cuba, Ecuador, Egypt, Iraq, Iran, Libya, Nigeria, and Syria), special note of this possibility is made in Table 1.

In some of these cases (as indicated in the footnotes of Table 1), it is believed that a better estimate of total military expenditures is obtained by adding to nominal military expenditures the value of arms imports (as shown in Table II and converted to local currency by current exchange rates). It must be cautioned, however, that this method may over- or underestimate the actual expenditures in a given year due to the fact that payment for arms may not coincide in time with deliveries, which the data in Table II reflect. Also, arms acquisitions in some cases may be financed by, or consist of grants from, other countries.

In Statistical Table I, the symbol "E" denotes rough estimates such as those described above and others made on the basis of partial or uncertain data. In a few cases of particular interest, very rough estimates are also shown, marked with the symbol "R" and printed in shaded type. It should be understood that these estimates are based on scant information and are subject to a wide range of error.

For countries that have major clandestine nuclear or other military weapons development programs, such as Iraq, estimation of military expenditures is extremely difficult and especially subject to errors of underestimation.

Further improvements in the quality of the military expenditure data presented for countries throughout the world will be difficult to achieve without better reporting by the countries themselves. As has been noted elsewhere, "There is growing evidence that important amounts of security expenditures may not enter the accounts or the national budgets of many developing countries." (see Note 2) Among the mechanisms commonly used to obscure such expenditures are: double-bookkeeping, use of extrabudgetary accounts, highly aggregated budget categories, military assistance, and manipulation of foreign exchange.

Particular problems arise in estimating the military expenditures of communist countries due to the exceptional scarcity and ambiguity of released information. As in past editions of this publication, data on the military expenditures of the Soviet Union are based on Central Intelligence Agency (CIA) estimates. For most of the series, these are estimates of what it would cost in the United States in dollars to develop, procure, staff and operate a military force similar to that of the Soviet Union (see Note 3). Estimates of this type—that is, those based entirely on one country's price pattern—generally overstate the relative size of the second country's expenditures in intercountry comparisons (see Note 4). Also, such estimates are not consistent with the methods used here for converting other countries' expenditures into dollars (see Note 5).

Nevertheless, the basic CIA estimates are the best available for present purposes; in fact, there are no alternative estimates that can inspire confidence and have the capability to detect relatively small changes over time, such as the slowdown and decline in Soviet military spending that the CIA estimates have indicated. Soviet estimates for the most recent years are based on the change in the index of CIA-estimated military expenditures in ruble terms, as reported in the Joint Economic Committee of Congress series, *Allocation of Resources in the Soviet Union and China*, *op. cit.*

For Russia, estimated military spending trends in rubles are used in conjunction with dollar estimates for earlier years to make very rough estimates of spending in dollars. (See also the section on the ME/GNP ratio, below.)

For former Warsaw Pact countries other than the Soviet Union, the estimates of military expenditures through 1989 are from Thad P. Alton *et al* (see Note 6). These estimates cover the officially announced state budget expenditures on national defense and thus understate total military expenditures to the extent of possible defense outlays by non-defense agencies of the central government, local governments, and economic enterprises. Possible subsidization of military procurement may also cause understatement. The dollar estimates were derived by calculating pay and allowances at the current full US average rates for officers and for lower ranks. After subtraction of pay and allowances, the remainder of the official defense budgets in national currencies was converted into dollars at overall rates based on comparisons of the various countries' GNPs expressed in dollars and in national currencies. The rates are based in part on the purchasing power parities estimated by the International Comparison Project of the United Nations, including their latest (Phase V) versions.

Estimates for these countries in 1990 and 1991 are based on total military spending in national currency as reported by the respective governments to the UN (in most cases) or the IMF. These expenditures *in toto* are converted to dollars at the Alton GNP conversion rates for 1989 as adjusted to 1991 by the respective US and national GNP deflators (per the World Bank), without estimating personnel compensation separately at US dollar rates, as was done for earlier years. The resulting military conversion rates (in national currency per dollar) are substantially higher than the implied rates for previous years, substantially lower than the 1991 market rate, and approximately the same as the implied rate for GNP (see below).

Estimates for the newly independent states of the former Soviet Union, Yugoslavia, and Czechoslovakia and other former Warsaw Pact countries present difficulties due to scarcity of reliable data in national currencies or to problems in converting to dollars. The basic method employed for most of these countries was to establish the ratio of military expenditures to GNP in national currency and then to multiply this ratio by the World Bank's estimate of GNP in dollars as converted to international dollars by estimated purchasing power parities (PPPs) and reported in the *World Bank Atlas 1996*. This method implicitly converts military spending at the GNP-wide PPP, which, as with conversion by exchange rates, preserves the same ME/GNP ratio in dollars as obtains in national currency.

Data used here for China are based on US Government estimates of the yuan costs of Chinese forces, weapons, programs and activities (see Note 7). Costs in yuan are here converted to dollars using the same estimated conversion rate as used for GNP (see below). Due to the exceptional difficulties in both estimating yuan costs and converting them to dollars, comparisons of Chinese military spending with other data should be treated as having a wide margin of error.

Other published sources used include the *Government Finance Statistics Yearbook*, issued by the International Monetary Fund; *The World Factbook*, produced annually by the Central Intelligence Agency; *The Military Balance*, issued by the International Institute for Strategic Studies, (London); and the *SIPRI Yearbook: World Armaments and Disarmament*, issued by the Stockholm International Peace Research Institute.

For the benefit of users concerned with accuracy, table entries based on inadequate data and/or simplistic methods and yielding approximative estimates that are not fully comparable with those for earlier years are marked "R", for "rough estimate".

Gross National Product (GNP)

GNP represents the total output of goods and services produced by residents of a country, valued at market prices. The source of GNP data for most non-communist countries is the International Bank for Reconstruction and Development (World Bank).

For a number of countries whose GNP is dominated by oil exports (Bahrain, Kuwait, Libya, Oman, Qatar, Saudi Arabia, and the United Arab Emirates), the World Bank's estimate of deflated (or constant price) GNP in domestic currency tends to understate increases in the

monetary value of oil exports, and thus of GNP, resulting from oil price increases. These World Bank estimates are designed to measure real (or physical) product. An alternative estimate of constant-price GNP was therefore obtained using the implicit price deflator (see Note 8) for US GNP (for lack of a better national deflator). This is considered appropriate because a large share of the GNP of these countries is realized in US dollars.

GNP estimates of the Soviet Union are by the CIA, as published in its *Handbook of Economic Statistics 1990* and updated. GNP estimates for other Warsaw Pact countries through 1989 are from "East European Military Expenditures, 1965-1978" by Thad P. Alton and others, *op. cit.*, as updated and substantially revised by the authors. These estimates through 1989 have been extended to 1990 and 1991 on the basis of estimates for those years in the CIA's *Handbook of Economic Statistics*, 1992.

Estimates of GNP in 1992-1994 for successor states to the Soviet Union, Yugoslavia, and Czechoslovakia are based on World Bank estimates of GNP per capita employing PPPs, as published in the *World Bank Atlas 1996*.

GNP data for China are based on World Bank estimates in yuan. These are in line with estimates of GDP in Western accounting terms made by Chinese authorities. Converting estimates in yuan to dollars is highly problematic, however, due to the inappropriateness of the official exchange rate and lack of sufficient yuan price information by which to reliably estimate PPPs. (The ratio of the highest to the lowest estimates by various sources of China's GNP is on the order of 6 or 7 to 1, which would make the world rank of China's GNP vary between about 3rd or 4th and 12th.) The conversion rate used here is based on a PPP estimated for 1981 (see Note 9) and moved by respective US and China implicit GNP deflators to 1994.

GNP estimates for a few non-communist countries are from the CIA's *Handbook of Economic Statistics* cited above. Estimates for the other communist countries are rough approximations.

Military Expenditures-to-GNP Ratio

It should be noted that the meaning of the ratio of military expenditures to GNP, shown in Table I, differs somewhat between most communist (or previously communist) and other countries. For non-communist countries, both military expenditures and GNP are converted from the national currency unit to dollars at the same exchange rate; consequently, the ratio of military expenditures to GNP is the same in dollars as in the national currency and reflects national relative prices. For communist countries, however, military expenditures and GNP are converted differently. Soviet military expenditures, as already noted, are estimated in a way designed to show the cost of the Soviet armed forces in US prices, as if purchased in this country. On the other hand, the Soviet GNP estimates used here are designed to show average relative size when both US and Soviet GNP are valued and compared at both dollar and ruble prices. The Soviet ratio of military expenditures to GNP in ruble terms, the preferred method of comparison, is estimated to have been 15-18% in recent years.

The estimated ratio for Russia derived here in dollars is probably somewhat overstated, since military spending in dollars is related to earlier estimates for the Soviet Union, while GNP estimates (at PPPs) are by the World Bank. Russia's burden ratio in ruble terms is preferably estimated to be in the vicinity of 10% or less.

For Eastern European countries, the ratios of military expenditures to GNP in dollars are about twice the ratios that would obtain in domestic currencies. (See Alton and others, *op. cit.*) However, since official military budgets in these countries probably substantially understate their actual military expenditures, the larger ratios based on dollar estimates are believed to be the better approximations of the actual ratios.

Central Government Expenditures (CGE)

These expenditures include current and capital (developmental) expenditures plus net lending to government enterprises by central (or federal) governments. A major source is the International Monetary Fund's *Government Finance Statistics Yearbook*. The category used here is "Total Expenditures and Lending minus Repayment, Consolidated Central Government."

Other sources for these data are the International Monetary Fund, *International Financial Statistics* (monthly); OECD, *Economic Surveys*; and CIA, *The World Factbook* (annual). Data for Warsaw Pact countries are from national publications and are supplied by Thad P. Alton and others. For all Warsaw Pact countries and China, conversion to dollars is at the implicit rates used for calculating dollar estimates of GNP.

For all countries, with the same exceptions as noted above for the military expenditures-to-GNP ratio, military expenditures and central government expenditures are converted to dollars at the same rate; the ratio of the two variables in dollars thus remains the same as in national currency.

It should be noted that for the Soviet Union, China, Iran, Jordan, and possibly others, the ratio of military expenditures to central government expenditures may be overstated, inasmuch as the estimate for military expenditures is obtained at least in part independently of nominal budget or government expenditure data, and it is possible that not all estimated military expenditures pass through the nominal central government budget.

Population

Population estimates are for midyear and are made available to ACDA by the US Bureau of the Census.

Armed Forces

Armed forces refer to active-duty military personnel, including paramilitary forces if those forces resemble regular units in their organization, equipment, training, or mission. Reserve forces are not included unless specifically noted.

Figures for the United States and all other NATO countries are as reported by NATO. Estimates of the number of personnel under arms for other countries are provided by US Government sources. The armed forces series for the Soviet Union includes all special forces judged to have national security missions (e.g., KGB border guards) and excludes uniformed forces primarily performing noncombatant services (construction, railroad, civil defense, and internal security troops).

Arms Transfers

Arms transfers (arms imports and exports) represent the international transfer (under terms of grant, credit, barter or cash) of military equipment, usually referred to as conventional," including weapons of war, parts thereof, ammunition, support equipment, and other commodities designed for military use. Among the items included are tactical guided missiles and rockets, military aircraft, naval vessels, armored and nonarmored military vehicles, communications and electronic equipment, artillery, infantry weapons, small arms, ammunition, other ordnance, parachutes, and uniforms. Dual use equipment, which can have application in both military and civilian sectors, is included when its primary mission is identified as military. The building of defense production facilities and licensing fees paid as royalties for the production of military equipment are included when they are contained in military transfer agreements. There have been no international transfers of purely strategic weaponry. Military services such as training, supply operations, equipment repair, technical assistance, and construction are included where data are available. Excluded are foodstuffs, medical equipment, petroleum products and other supplies.

Redefinition of US Arms Exports. The scope of US arms exports data has been modified in this edition. These exports include both government-to-government transfers under the Foreign Military Sales (FMS), Military Assistance Program (MAP), and other programs administered by the Department of Defense, and commercial (enterprise-to-government) transfers licensed by the Department of State under International Traffic in Arms Regulations. Under the previous practice, the materiel component (arms, equipment, and "hardware" items) of FMS and MAP sales was included, while the military services component was excluded (although the magnitude and general destination of the omitted services was reported in these Statistical Notes). The commercial sales category, covering both materiel and military services, was included in its entirety. Beginning with this edition, both the materiel and the military services components of FMS and other government-to-government sales (such as the International Military Education and Training Program-IMET) are included in total US arms exports as reported here.

The previous omission of FMS and other military services was intended to improve comparability with available estimates of the arms exports of other countries, which tended to contain a much smaller services component and/or were subject to significant underestimation (services being less easily observed). The increasing importance of these services and the desire to present a full picture of US arms exports consistent with other sources prompted the change to inclusion. Users should be aware, however, of both the lower true share of services in other countries' arms exports and the tendency to underestimate them. It should also be noted that a portion of the IMET program is devoted to programs that promote improved civil military relations.

The change in scope of US arms exports has increased their overall volume by amounts ranging over the last decade from \$2.3 billion (current dollars) to \$3.7 billion for deliveries and \$2.3 billion to \$7.3 billion for agreements.

The statistics contained in Tables II, III and part of IV are estimates of the value of goods actually delivered during the reference year, in contrast both to payments and the value of programs, agreements, contracts, or orders concluded during the period, which are expected to result in future deliveries. However, summary data on arms transfer agreements are presented in Table IV. Both deliveries and agreements data represent arms transfers to governments and do not include the value of arms obtained by subnational groups.

Figures for US arms exports are for fiscal years as reported by the US Departments of Defense and State. Data on US arms export agreements shown in Table IV have the same coverage as deliveries data. Commercial agreements are here taken to equal deliveries, since agreements data as such are not available and data on commercial licenses issued are not considered sufficiently indicative.

US Arms Imports. Data on US arms import data in this and the previous three editions are revised upward substantially from earlier editions. The present series consists of data obtained from the Department of Commerce, Bureau of Economic Analysis (BEA), including (a) imports of military-type (formerly "special category") goods, as compiled by the Bureau of the Census, and (b) Department of Defense direct expenditures abroad for major equipment, as compiled from DOD data by BEA. The goods in (a) include: complete military aircraft, all types; engines and turbines for military aircraft; military trucks, armored vehicles, etc.; military (naval) ships and boats; tanks, artillery, missiles, guns, and ammunition; military apparel and footwear; and other military goods, equipment, and parts.

Data on countries other than the United States are estimates by US Government sources. Arms transfer data for the Soviet Union and other former communist countries are approximations based on limited information. (See Note 10)

It should be noted that the arms transfer estimates for the most recent year, and to a lesser extent for several preceding years, tend to be understated. This applies to both foreign and US arms exports. In the former case, information on transfers comes from a variety of sources and is sometimes acquired and processed with a considerable time lag. In the US case, commercial arms

transfer licenses are now valid for three years, causing a delay in the reporting of deliveries made on them to statistical agencies. Data for the most recent two years in Main Statistical Tables II, III, and IV, therefore, can be expected to undergo some upward revision in succeeding issues.

Close comparisons between the estimated values shown for arms transfers and for GNP and military expenditures are not warranted. Frequently, weapons prices do not reflect true production costs. Furthermore, much of the international arms trade involves offset or barter arrangements, multiyear loans, discounted prices, thirdparty payments, and partial debt forgiveness. Acquisition of armaments thus may not impose the burden on an economy, whether in the same or in other years, that is implied by the estimated equivalent US dollar value of the shipment. Therefore, the value of arms imports should be compared to other categories of data with care.

Total Imports and Exports

The values for imports and exports cover merchandise transactions and come mainly from *International Financial Statistics* published by the IMF. The trade figures for presently and formerly communist countries are from the *CIA Handbook of Economic Statistics*, 1995 edition.

Conversion of National Currencies to Dollars

All value data in the report are expressed in US dollars. For most countries, this requires the conversion into dollars of amounts expressed in national currencies at current (or "then-year") prices. Available methods for doing so are less than satisfactory in all respects. The approach adopted in this series of reports relies on market or par exchange rates. In this method, current-price national currency data for an entire series of years is converted to current US dollars through the use of a single (base-year) exchange rate and two price indexes, one national and one US.

Basic Steps

The conversion approach used here consists essentially of three steps:

a) Each country's data, expressed originally in the national currency and at current prices, are "deflated" or put into constant-price terms, usually by means of the country's implicit deflator for GNP as a whole. This GNP price index is used also for other variables-military and central government expenditures-because more appropriate price indices for those sectors are not generally available. National currency data for all years are expressed in prices of the conversion base year (1994 in this issue).

b) These data are then divided by the average exchange rate in the base year between the national currency and the US dollar and thus converted into constant baseyear (1994) dollars. Exchange rates are provided by the World Bank and are usually the annual average par/market rate, (the "rf" rate as designated by the International Monetary Fund).

c) Data in constant dollars are then expressed in current dollars by multiplying by the US implicit GNP deflator.

The calculation may be illustrated by an example, assuming the following data:

1984 national military expenditures, in national currency at current (1984) prices = 4,600

1984 implicit GNP deflators (1994 = 100):

National	55.5
US	77.7

1994 exchange rate, national currency units per dollar = 15.92

Then, 1984 national military expenditures:

In constant 1994 dollars = 4,600 divided by .555 divided by 15.92 = 520.6

In current (1984) dollars = 520.6 x .777 = 404.5

Advantages and Disadvantages

The use in this report of the same rate for converting all variables from national currencies to US dollars (with the exceptions noted below) means that the relationships among variables in national currency terms remain the same when those variables are expressed in dollars.

The conversion method used here has an advantage in that it takes into account national differences in the behavior of prices and, within each edition, avoids the distorting effect that can result from changes in exchange rates during the decade. It does not, however, allow for a number of other factors. One is that any within-country differences between the price indices for military or central government expenditures and for GNP are not taken into account. For example, indices for compensation of military personnel or prices of imported arms might behave differently from the overall index.

A more serious problem is that exchange rates in many cases do not adequately reflect the relative purchasing power of currencies. This has been demonstrated by a detailed study of purchasing power parities (PPPs) for the GNPs of a large number of countries (see Note 11). This study found that the greater the disparity in the per capita income of countries, the greater the tendency for exchange rates to understate the value of the poorer country's product, and that the understatement can be very large, reaching as much as threefold in some cases. However, since this study did not estimate PPPs for military expenditures as such, it does not shed much light on how PPPs specific to military expenditures or arms purchases might differ from exchange rates or from either overall or other sector-specific PPPs (see Note 12).

A disadvantage of the method used here in WMEAT is that the resulting conversion to current dollars for a given year can vary from edition to edition, despite the absence of any change in data for that year itself. The change is due solely to the rolling up of the exchange rate base year so as to make it more up-to-date, which usually means a change in the exchange rate used.

Such changes have been exceptionally large and frequent recently. This was due to two major factors: (1) the change from an appreciating and overvalued U.S. dollar (until 1985) to a depreciating one and (2) the very high inflation rates and concomitantly large exchange-rate movements occurring in a number of developing countries, together with the tendency of the exchange rate changes to undercompensate or overcompensate for relative price movements.

For a discussion of the extent of the changes and their impact on inter-country comparisons and group averages, see *WMEAT 1988*, pp. 135-136. The changes in exchange rates have not been as extensive in recent years, except for the growing number of high inflation countries.

Exceptions

There are several exceptions to the general conversion procedures discussed above. Data on arms transfers in value terms for all countries obtained by this Agency are already expressed in current dollars. (Original data in foreign currencies have generally been converted by the source at current exchange rates.) These current dollars are converted to constant 1994 dollars in the manner shown above. For the Soviet Union, GNP estimates in rubles are converted by the source into constant dollars at what is in effect an average US-and-Soviet-weighted PPP for GNP as a whole. This same conversion rate is also used for Soviet central government expenditures. Soviet

military expenditures are in effect converted by the source at a military-sector PPP using only Soviet weights. (See also the discussion of Military Expenditures, above).

For other Warsaw Pact countries and China, the available estimates for GNP and military expenditures are also already in terms which accounted for domestic price changes and have been converted to constant dollars using estimated purchasing power parities, rather than official exchange rates.

For successor states to the Soviet Union, Yugoslavia, and Czechoslovakia and other former Warsaw Pact countries, GNP in dollars is based on estimates of GNP per capita converted at PPPs and published by the World Bank in its *World Bank Atlas 1996*. Other variables are converted to dollars by multiplying a ratio of the variable to GNP in national currency by GNP in dollars. This is equivalent to using the GNP PPP to convert the other variable from national currency to dollars.

It should be noted that in all cases the relationship between current and constant dollars in this report is determined entirely by the US GNP deflator index. To facilitate reconversion to other constant-dollar bases if desired, this index, rebased here to 1994=100, is as follows:

198472.25	1989	86.11
198574.88	1990	89.85
198676.90	1991	93.29
198779.34	1992	95.89
198882.40	1993	97.98

Growth Rates

The average annual rates of real growth shown in Tables 1-5 of the Highlights are based on data in constant 1994 dollars from Tables I and II. The rates are calculated by a least-squares fit to all years of the period of the log form (to the base 10) of the following "compound interest" equation:

$$Y = A(1 + r/100)^T,$$

or

$$\text{Log} Y = \text{Log} A + \text{Log}(1 + r/100) \times T,$$

where Y is military expenditures (or other variable) in a given year, A is the initial value for year 0, T is time in years, and r is the growth rate in percent. This formula was used in all cases to provide a consistent measure of change and is not intended to provide the best fit for projection purposes.

NOTES

Note 1 - The UN member countries as of 1994 not covered are Andorra, Antigua and Barbuda, the Bahamas, Comoros, Dominica, Grenada, Liechtenstein, Maldives, Marshall Islands, Micronesia, Monaco, Montserrat, Palau, Saint Christopher and Nevis, Saint Lucia, Saint Vincent and the Grenadines, San Marino, Seychelles, Solomon Islands, Vanuatu, and Western Samoa. Also excluded are: nonmember countries Kiribati, Nauru, Tonga, and Vatican City; the territory with unresolved sovereignty of Western Sahara; the dependencies and areas of special sovereignty of Bermuda, Hong Kong, Macau, Puerto Rico, and numerous others, many being very small islands in the Atlantic and Pacific Oceans.

Note 2 - Nicole Ball, "Measuring Third World Security Expenditure: A Research Note," *World Development*, February 1984, pp. 157-164 (Pergamon Press, London).

Note 3 - See CIA, *Soviet and US Defense Activities, 1971-80: A Dollar Cost Comparison*, January 1981. The CIA dollar estimates as shown in this source have been updated and augmented by

estimated retirement pay at US rates in order to improve comparability with expenditures by NATO countries, which include retirement pay.

Note 4 - This tendency is widely recognized in both government and nongovernment circles. For detailed commentaries by academic and government witnesses on this and other problems in estimating and comparing Soviet military expenditures, see the series of Hearings held before the Subcommittee on National Security Economics and the Subcommittee on Technology and National Security, Joint Economic Committee, Congress of the United States, *Allocation of Resources in the Soviet Union and China*. See also Hearing before the Subcommittee on Oversight of the Permanent Select Committee on Intelligence, Congress of the United States, "CIA Estimates of Soviet Defense Spending," Ninety-Sixth Congress, Second Session; Donald F. Burton, "Estimating Soviet Defense Spending," *Problems Of Communism*, March-April 1983; and Richard F. Kaufman, "Causes of the Slowdown in Soviet Defense" (with comments by others), *Soviet Economy*, January-March 1985.

Note 5 - An alternative series employing the same basic data but reflecting both the US and Soviet price patterns was provided in previous editions of this publication. See table captioned "Alternative Estimates of Soviet Military Expenditures," *World Military Expenditures and Arms Transfers, 1969-1978*, p.27; and the essay, "Soviet Military Expenditures," *World Military Expenditures and Arms Transfers, 1968-1977*, pp. 13-19.

Note 6 - The estimates are updates and substantial revisions of those in their article, "East European Military Expenditures, 1965-1978," (published in the Joint Economic Committee of Congress Compendium, *East European Economic Assessment*, Part 2, July 10, 1981, pp. 409-433) and particularly in their most recent Occasional Papers, Nos. 115-119 (published by the Research Project on National Income in East Central Europe).

Note 7 - Edward P. Parris, *Chinese Estimated Expenditures, 1967-83*, (Defense Intelligence Agency), November 1984. See also the series of Hearings before the Subcommittee on Priorities and Economy in Government of the Joint Economic Committee, US Congress, "Allocation of Resources in the Soviet Union and China."

Note 8 - The implicit price deflator is the ratio of GNP in current prices to GNP in constant prices.

Note 9 - Jeffrey R. Taylor, *Dollar Estimates for China*, Center for International Research Staff Paper No. 59, US Bureau of the Census, March 1991. This PPP appears to be carefully constructed from detailed Chinese data and yields an intermediate result. When moved to 1993, this parity (1.293 yuan/dollar) is used to produce dollar values in the same manner as the 1993 exchange rate for other countries. (See Conversion of National Currencies to Dollars.)

Note 10 - Soviet arms transfers and foreign trade data are taken from sources that present them directly in dollars; hence, particular caution should be used in comparing these statistics for arms transfers and foreign trade with other Soviet data.

Note 11 - These PPPs have been estimated by the United Nations International Comparisons Project, a cooperative undertaking of the United Nations, the World Bank and the University of Pennsylvania. See Irving Kravis, Alan Heston, and Robert Summers, *World Product and Income: International Comparisons of Real Gross Product*, published for the World Bank by the Johns Hopkins University Press, Baltimore and London, 1982.

Note 12 - A United Nations expert group has studied the feasibility of constructing purchasing power parities and price indices for military expenditures (A/40/421, 13 August 1985). However, practical prospects for the future availability of usable military PPPs are poor due to the lack of underlying national data, especially on military prices.
